

INTERNET-DRAFT

Intended Category: Standard Track

Expires: 20 May 2002

Obsoletes: RFC [1274](#)

Updates: RFC [2798](#)

Editor: Kurt D. Zeilenga

OpenLDAP Foundation

20 November 2001

LDAPv3: A Collection of User Schema
[<draft-zeilenga-ldap-user-schema-04.txt>](#)

Status of this Memo

This document is an Internet-Draft and is in full conformance with all provisions of [Section 10 of RFC2026](#).

This document is intended to be, after appropriate review and revision, submitted to the RFC Editor as a Standard Track document. Distribution of this memo is unlimited. Technical discussion of this document will take place on the IETF Directory Interest mailing list <directory@apps.ietf.org>. Please send editorial comments directly to the author <Kurt@OpenLDAP.org>.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts. Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as ``work in progress.''

The list of current Internet-Drafts can be accessed at <<http://www.ietf.org/ietf/1id-abstracts.txt>>. The list of Internet-Draft Shadow Directories can be accessed at <<http://www.ietf.org/shadow.html>>.

Please see the Copyright section near the end of this document for more information.

Abstract

This document provides a collection of user schema elements for use with LDAP collected from numerous sources including [RFC 1274](#), X.501, and X.520.

Conventions

Schema definitions are provided using LDAPv3 description formats [[RFC2252](#)]. Definitions provided here are formatted (line wrapped) for readability.

The key words "SHALL", "SHALL NOT", "MUST", "MUST NOT", "SHOULD", "SHOULD NOT", "MAY" and "MAY NOT" used in this document are to be interpreted as described in [BCP 14](#) [[RFC2119](#)].

1. Background and Intended Use

This document provides descriptions [[RFC2252](#)] of user schema for use with LDAP [[LDAPTS](#)] collected from numerous sources.

This document includes a summary of select schema introduced for the COSINE and Internet X.500 pilot projects [[RFC1274](#)]. This document obsoletes [RFC 1274](#).

This document contains a summary of X.500 user schema [[X.520](#)] not included in LDAPv3 [[RFC2252](#)][[RFC2256](#)]. Some of these items were described in the inetOrgPerson [[RFC2798](#)] schema. This document supersedes these descriptions, replacing sections [9.1.3](#) and [9.3.3](#) of [RFC 2798](#).

2. Matching Rules

This section introduces LDAP matching rules based upon descriptions of their X.500 counterparts.

2.1. booleanMatch

BooleanMatch compares for equality a asserted Boolean value with an attribute value of BOOLEAN syntax. The rule returns TRUE if and only if the values are the same, i.e. both are TRUE or both are FALSE.
(Source: X.520)

```
( 2.5.13.13 NAME 'booleanMatch'  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.7 )
```

2.2. caseExactMatch

CaseExactMatch compares for equality the asserted value with an attribute value of DirectoryString syntax. The rule is identical to the caseIgnoreMatch [[RFC2252](#)] rule except that case is not ignored.
(Source: X.520)

```
( 2.5.13.5 NAME 'caseExactMatch'  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

2.3. caseExactOrderingMatch

CaseExactOrderingMatch compares the collation order of the asserted string with an attribute value of DirectoryString syntax. The rule is identical to the caseIgnoreOrderingMatch [[RFC2252](#)] rule except that letters are not folded. (Source: X.520)

```
( 2.5.13.6 NAME 'caseExactOrderingMatch'  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

2.3. caseExactSubstringsMatch

CaseExactSubstringsMatch determines whether the asserted value are substrings of an attribute value of DirectoryString syntax. The rule is identical to the caseIgnoreSubstringsMatch [[RFC2252](#)] rule except that case is not ignored. (Source: X.520)

```
( 2.5.13.7 NAME 'caseExactSubstringsMatch'  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.58 )
```

[2.4. caseIgnoreListSubstringsMatch](#)

CaseIgnoreListSubstringMatch compares the asserted substring with an attribute value which is a sequence of DirectoryStrings, but where the case (upper or lower) is not significant for comparison purposes. The asserted value matches a stored value if and only if the asserted value matches the string formed by concatenating the strings of the stored value. This matching is done according to the caseIgnoreSubstringsMatch [[RFC2252](#)] rule; however, none of the initial, any, or final values of the asserted value are considered to match a substring of the concatenated string which spans more than one of the strings of the stored value. (Source: X.520)

```
( 2.5.13.12 NAME 'caseIgnoreListSubstringsMatch'  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.58 )
```

[2.5. directoryStringFirstComponentMatch](#)

DirectoryStringFirstComponentMatch compares for equality the asserted DirectoryString value with an attribute value of type SEQUENCE whose first component is mandatory and of type DirectoryString. The rule returns TRUE if and only if the attribute value has a first component whose value matches the asserted DirectoryString using the rules of caseIgnoreMatch [[RFC2252](#)]. A value of the assertion syntax is derived from a value of the attribute syntax by using the value of the first component of the SEQUENCE. (Source: X.520)

```
( 2.5.13.31 NAME 'directoryStringFirstComponentMatch'  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

[2.6. integerOrderingMatch](#)

The integerOrderingMatch rule compares the ordering of the asserted integer with an attribute value of Integer syntax. The rule returns True if the attribute value is less than the asserted value. (Source: X.520)

```
( 2.5.13.15 NAME 'integerOrderingMatch'  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.27 )
```

[2.7. keywordMatch](#)

The keywordMatch rule compares the asserted string with keywords in an attribute value of DirectoryString syntax. The rule returns TRUE if and only if the asserted value matches any keyword in the attribute

value. The identification of keywords in an attribute value and of the exactness of match are both implementation specific. (Source: X.520)

```
( 2.5.13.32 NAME 'keywordMatch'  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

2.8. numericStringOrderingMatch

NumericStringOrderingMatch compares the collation order of the asserted string with an attribute value of NumericString syntax. The rule is identical to the caseIgnoreOrderingMatch [[RFC2252](#)] rule except that all space characters are skipped during comparison (case is irrelevant as characters are numeric). (Source: X.520)

```
( 2.5.13.9 NAME 'NumericStringOrderingMatch'  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.36 )
```

2.9. octetStringOrderingMatch

OctetStringOrderingMatch compares the collation order of the asserted octet string with an attribute value of OCTET STRING syntax. The rule compares octet strings from first octet to last octet, and from the most significant bit to the least significant bit within the octet. The first occurrence of a different bit determines the ordering of the strings. A zero bit precedes a one bit. If the strings are identical but contain different numbers of octets, the shorter string precedes the longer string. (Source: X.520)

```
( 2.5.13.18 NAME 'octetStringOrderingMatch'  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.40 )
```

2.10. storedPrefixMatch

StoredPrefixMatch determines whether an attribute value, whose syntax is DirectoryString, is a prefix (i.e. initial substring) of the asserted value, without regard to the case (upper or lower) of the strings. The rule returns TRUE if and only if the attribute value is an initial substring of the asserted value with corresponding characters identical except possibly with regard to case. (Source: X.520)

```
( 2.5.13.41 NAME 'storedPrefixMatch'  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

Note: This rule can be used, for example, to compare values in the Directory which are telephone area codes with a purported value which is a telephone number.

2.11. wordMatch

The wordMatch rule compares the asserted string with words in an attribute value of DirectoryString syntax. The rule returns TRUE if and only if the asserted word matches any word in the attribute value. Individual word matching is as for the caseIgnoreMatch [[RFC2252](#)] matching rule. The precise definition of a "word" is implementation specific. (Source: X.520)

```
( 2.5.13.32 NAME 'wordMatch'  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

3. Attribute Types

This section details attribute types for use in LDAP based upon their X.500 descriptions.

3.1. associatedDomain

The associatedDomain attribute type specifies a DNS domain [[RFC1034](#)] which is associated with an object. For example, the entry in the DIT with a distinguished name "DC=example,DC=com" might have an associated domain of "example.com". (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.37 NAME 'associatedDomain'  
    EQUALITY caseIgnoreIA5Match  
    SUBSTR caseIgnoreIA5SubstringsMatch  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.26 )
```

3.2. associatedName

The associatedName attribute type specifies an entry in the organizational DIT associated with a DNS domain [[RFC1034](#)]. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.38 NAME 'associatedName'  
    EQUALITY distinguishedNameMatch  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.12 )
```

3.3. buildingName

The buildingName attribute type specifies the name of the building where an organization or organizational unit is based. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.48 NAME 'buildingName'  
    EQUALITY caseIgnoreMatch  
    SUBSTR caseIgnoreSubstringsMatch  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.15{256} )
```

3.3. co

The co (Friendly Country Name) attribute type specifies names of countries in human readable format. The standard attribute country name must be one of the two-letter codes defined in [ISO 3166].
(Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.43  
    NAME ( 'co' 'friendlyCountryName' )  
    EQUALITY caseIgnoreMatch  
    SUBSTR caseIgnoreSubstringsMatch  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

3.4. destinationIndicator

The destinationIndicator attribute type specifies (according to CCITT Recommendation F.1 and CCITT Recommendation F.31) the country and city associated with the object (the addressee) needed to provide the Public Telegram Service. An attribute value for Destination Indicator is a printable string containing only alphabetical characters.
(Source: X.520)

```
( 2.5.4.27 NAME 'destinationIndicator'  
    EQUALITY caseIgnoreMatch  
    SUBSTR caseIgnoreSubstringsMatch  
    SYNTAX 1.3.6.1.4.1.1466.115.121.1.44{128} )
```

3.5. documentAuthor

The documentAuthor attribute type specifies the distinguished name of the author of a document. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.14 NAME 'documentAuthor'  
    EQUALITY distinguishedNameMatch
```

```
SYNTAX 1.3.6.1.4.1.1466.115.121.1.12 )
```

[**3.6. documentIdentifier**](#)

The documentIdentifier attribute type specifies a unique identifier for a document. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.11 NAME 'documentIdentifier'  
EQUALITY caseIgnoreMatch  
SUBSTR caseIgnoreSubstringsMatch  
SYNTAX 1.3.6.1.4.1.1466.115.121.1.15{256} )
```

[**3.7. documentLocation**](#)

The documentLocation attribute type specifies the location of the document original. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.15 NAME 'documentLocation'  
EQUALITY caseIgnoreMatch  
SUBSTR caseIgnoreSubstringsMatch  
SYNTAX 1.3.6.1.4.1.1466.115.121.1.15{256} )
```

[**3.8. documentPublisher**](#)

The documentPublisher attribute is the person and/or organization that published a document. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.56 NAME 'documentPublisher'  
EQUALITY caseIgnoreMatch  
SUBSTR caseIgnoreSubstringsMatch  
SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

[**3.9. documentTitle**](#)

The documentTitle attribute type specifies the title of a document. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.12 NAME 'documentTitle'  
EQUALITY caseIgnoreMatch  
SUBSTR caseIgnoreSubstringsMatch  
SYNTAX 1.3.6.1.4.1.1466.115.121.1.15{256} )
```

[**3.10. documentVersion**](#)

The documentVersion attribute type specifies the version number of a document. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.13 NAME 'documentVersion'  
  EQUALITY caseIgnoreMatch  
  SUBSTR caseIgnoreSubstringsMatch  
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15{256} )
```

[3.11. drink](#)

The drink (Favourite Drink) attribute type specifies the favorite drink of an object (or person). (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.5 NAME ( 'drink' 'favouriteDrink' )  
  EQUALITY caseIgnoreMatch  
  SUBSTR caseIgnoreSubstringsMatch  
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15{256} )
```

[3.12. houseIdentifier](#)

The houseIdentifier attribute type specifies a linguistic construct used to identify a particular building, for example a house number or house name relative to a street, avenue, town or city, etc. An attribute value for houseIdentifier is a string, e.g. "14". (Source: X.520)

```
( 2.5.4.51 NAME 'houseIdentifier'  
  EQUALITY caseIgnoreMatch  
  SUBSTR caseIgnoreSubstringsMatch  
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15{32768} )
```

[3.13. homePhone](#)

The homePhone (Home Telephone Number) attribute type specifies a home telephone number (e.g., "+44 71 123 4567") associated with a person. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.20  
  NAME ( 'homePhone' 'homeTelephoneNumber' )  
  EQUALITY telephoneNumberMatch  
  SUBSTR telephoneNumberSubstringsMatch  
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.50 )
```

[3.14. homePostalAddress](#)

The `homePostalAddress` attribute type specifies a home postal address for an object. This should be limited to up to 6 lines of 30 characters each. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.39
  NAME 'homePostalAddress'
  EQUALITY caseIgnoreListMatch
  SUBSTR caseIgnoreListSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.41 )
```

[3.15. host](#)

The `host` attribute type specifies a host computer. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.9
  NAME 'host'
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15{256} )
```

[3.16. info](#)

The `info` (Information) attribute type specifies any general information pertinent to an object. It is RECOMMENDED that specific usage of this attribute type is avoided, and that specific requirements are met by other (possibly additional) attribute types. It is noted the `description` attribute [[RFC2256](#)] for specifying descriptive information pertinent to an object. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.4
  NAME 'info'
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15{2048} )
```

[3.17. mail](#)

The `mail` (`rfc822mailbox`) attribute type holds an the electronic mail address in [[RFC822](#)] form (e.g.: `user@example.com`). Note that this attribute SHOULD NOT be used to hold non-Internet addresses. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.3
  NAME ( 'mail' 'rfc822Mailbox' )
```

```
EQUALITY caseIgnoreIA5Match
SUBSTR caseIgnoreIA5SubstringsMatch
SYNTAX 1.3.6.1.4.1.1466.115.121.1.26{256} )
```

[3.18. manager](#)

The Manager attribute type specifies the manager of an object represented by an entry. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.10
  NAME 'manager'
  EQUALITY distinguishedNameMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.12 )
```

[3.19. mobile](#)

The mobile (Mobile Telephone Number) attribute type specifies a mobile telephone number (e.g., "+44 71 123 4567") associated with a person. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.41
  NAME ( 'mobile' 'mobileTelephoneNumber' )
  EQUALITY telephoneNumberMatch
  SUBSTR telephoneNumberSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.50 )
```

[3.20. organizationalStatus](#)

The organizationalStatus attribute type specifies a category by which a person is often referred to in an organization. Examples of usage in academia might include undergraduate student, researcher, lecturer, etc.

A Directory administrator should probably consider carefully the distinctions between this and the title and userClass attributes. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.45
  NAME 'organizationalStatus'
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15{256} )
```

[3.21. otherMailbox](#)

The otherMailbox attribute type specifies values for electronic mailbox types other than X.400 and [RFC822](#). (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.22
  NAME 'otherMailbox'
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.39 )
```

[3.22. pager](#)

The pager (Pager Telephone Number) attribute type specifies a pager telephone number (e.g., "+44 71 123 4567") for an object. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.42
  NAME ( 'pager' 'pagerTelephoneNumber' )
  EQUALITY telephoneNumberMatch
  SUBSTR telephoneNumberSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.50 )
```

[3.23. personalTitle](#)

The personalTitle attribute type specifies a personal title for a person. Examples of personal titles are "Frau", "Dr", "Herr", and "Prof". (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.40
  NAME 'personalTitle'
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15{256} )
```

[3.24. roomNumber](#)

The roomNumber attribute type specifies the room number of an object. Note that the cn (commonName) attribute should be used for naming room objects. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.6
  NAME 'roomNumber'
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15{256} )
```

[3.25. secretary](#)

The secretary attribute type specifies the secretary of a person. The attribute value for Secretary is a distinguished name. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.21
  NAME 'secretary'
  EQUALITY distinguishedNameMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.12 )
```

[3.26. uid](#)

The uid (userid) attribute type specifies a computer system login name. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.1
  NAME ( 'uid' 'userid' )
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15{256} )
```

[3.27. uniqueIdentifier](#)

The Unique Identifier attribute type specifies a "unique identifier" for an object represented in the Directory. The domain within which the identifier is unique, and the exact semantics of the identifier, are for local definition. For a person, this might be an institution-wide payroll number. For an organizational unit, it might be a department code. An attribute value for uniqueIdentifier is a directoryString. (Source: [RFC 1274](#))

```
( 2.5.4.45 NAME 'uniqueIdentifier'
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15{256} )
```

Note: X.520 describes an attribute also called 'uniqueIdentifier' (2.5.4.45) which is called 'x500UniqueIdentifier' in LDAP [[RFC2256](#)]. The attribute detailed here ought not be confused with x500UniqueIdentifier.

[3.28. userClass](#)

The userClass attribute type specifies a category of computer user. The semantics placed on this attribute are for local interpretation. Examples of current usage od this attribute in academia are

undergraduate student, researcher, lecturer, etc. Note that the organizationalStatus attribute may now often be preferred as it makes no distinction between computer users and others. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.1.8 NAME 'userClass'  
  EQUALITY caseIgnoreMatch  
  SUBSTR caseIgnoreSubstringsMatch  
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15{256} )
```

4. Object Classes

This section details attribute types for use in LDAP based upon their X.500 descriptions.

4.1. account

The account object class is used to define entries representing computer accounts. The uid (userid) attribute should be used for naming entries of this object class. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.4.5  
  NAME 'account'  
  SUP top STRUCTURAL  
  MUST uid  
  MAY ( description $ seeAlso $ l $ o $ ou $ host ) )
```

4.2. document

The document object class is used to define entries which represent documents. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.4.6  
  NAME 'document'  
  SUP top STRUCTURAL  
  MUST documentIdentifier  
  MAY ( cn $ description $ seeAlso $ l $ o $ ou $  
        documentTitle $ documentVersion $ documentAuthor $  
        documentLocation $ documentPublisher ) )
```

4.3. documentSeries

The documentSeries object class is used to define an entry which represents a series of documents (e.g., The Request For Comments memos). (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.4.9
  NAME 'documentSeries'
  SUP top STRUCTURAL
  MUST cn
  MAY ( description $ l $ o $ ou $ seeAlso $
        telephonenumber ) )
```

4.4. domainRelatedObject

The domainRelatedObject object class is used to define entries which represent DNS domains which are "equivalent" to an X.500 domain: e.g., an organization or organizational unit. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.4.17
  NAME 'domainRelatedObject'
  SUP top AUXILIARY
  MUST associatedDomain )
```

4.5. friendlyCountry

The friendlyCountry object class is used to define country entries in the DIT. The object class is used to allow friendlier naming of countries than that allowed by the object class country. The naming attribute of object class country, c (countryName), has to be a 2 letter string defined in [[IS03166](#)]. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.4.18
  NAME 'friendlyCountry'
  SUP country STRUCTURAL
  MUST co )
```

4.6. rFC822LocalPart

The rFC822LocalPart object class is used to define entries which represent the local part of [[RFC822](#)] mail addresses. This treats this part of an [RFC 822](#) address as a domain [[RFC2247](#)]. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.4.14
  NAME 'rFC822localPart'
  SUP domain STRUCTURAL
  MAY ( cn $ description $ destinationIndicator $
        facsimileTelephoneNumber $ internationaliSDNNumber $
        physicalDeliveryOfficeName $ postalAddress $
        postalCode $ postOfficeBox $ preferredDeliveryMethod $
        registeredAddress $ seeAlso $ sn $ street $
```

```
telephoneNumber $ teletexTerminalIdentifier $  
telexNumber $ x121Address ) )
```

4.7. room

The room object class is used to define entries representing rooms. The cn (commonName) attribute should be used for naming entries of this object class. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.4.7 NAME 'room'  
  SUP top STRUCTURAL  
  MUST cn  
  MAY ( roomNumber $ description $  
        seeAlso $ telephoneNumber ) )
```

4.8. simpleSecurityObject

The simpleSecurityObject object class is used to allow an entry to have a userPassword attribute when an entry's principal object classes do not allow userPassword as an attribute type. (Source: [RFC 1274](#))

```
( 0.9.2342.19200300.100.4.19 NAME 'simpleSecurityObject'  
  SUP top AUXILIARY  
  MUST userPassword )
```

Note: Security considerations related to the use of simple authentication mechanisms in LDAP are discussed in [RFC 2829](#) [[RFC2829](#)].

5. Security Considerations

General LDAP security considerations [[LDAPTS](#)] is applicable to the use of this schema. Additional considerations are noted above where appropriate.

6. Acknowledgments

This document borrows from a number of IETF documents including [RFC 1274](#) by Paul Barker and Steve Kille. This document also borrows from a number of ITU documents including X.520.

7. Author's Address

Kurt D. Zeilenga
