This document defines two extensions (Select and Sort)
for the Service Location Protocol (SLP). These extensions allow a
User Agent (UA) to request that the Uniform Resource Locator (URL)
entries in a Service Reply (SrvRply) be limited to the specified
number, or be sorted according to the specified sort key list. Using
these two extensions together can facilitate discovering the best
match, such as finding a service that has the maximum speed or the
minimum load.

This memo defines an Experimental Protocol for the Internet community.
It does not specify an Internet standard of any kind. Discussion and
suggestions for improvement are requested. Distribution of this memo
is unlimited.
