## A YANG Data Model for Client-layer Tunnel [draft-zheng-ccamp-client-tunnel-yang-01](#)

### Abstract

A transport network is a server-layer network to provide connectivity services to its client. In this draft the tunnel of client is described, with the definition of client tunnel YANG model.

### Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on May 3, 2018.

## [1. Introduction](#)

A transport network is a server-layer network designed to provide connectivity services for a client-layer network to carry the client traffic transparently across the server-layer network resources. The tunnel model in Traffic-Engineered network has been defined in both generic way and technology-specific way. The generic model, which is the base TE tunnel YANG model, can be found at [[I-D.ietf-teas-yang-te](#)]. Technology-specific models, such as OTN/WSON tunnel model, have also been defined in [[I-D.ietf-ccamp-otn-tunnel-model](#)] and [[I-D.lee-ccamp-wson-tunnel-model](#)] respectively. Corresponding tunnel on client-layer is also required, to have a complete topology view from the perspective of network controllers.

This document defines a data model of all client-layer tunnel, using YANG language defined in [[RFC7950](#)]. The model is augmenting the generic TE tunnel model, and can be used by applications exposing to a network controller via a REST interface. Furthermore, it can be

Zheng, et al.

Expires May 3, 2018

[Page 2]

used by an application to describe the client tunnel that constructed above the server-layer network.

## **2. Terminology and Notations**

A simplified graphical representation of the data model is used in this document. The meaning of the symbols in the YANG data tree presented later in this document is defined in [[I-D.ietf-netmod-yang-tree-diagrams](#)]. They are provided below for reference.

- o Brackets "[" and "]" enclose list keys.
- o Abbreviations before data node names: "rw" means configuration (read-write) and "ro" state data (read-only).
- o Symbols after data node names: "?" means an optional node, "!" means a presence container, and "\*" denotes a list and leaf-list.
- o Parentheses enclose choice and case nodes, and case nodes are also marked with a colon ":".
- o Ellipsis ("...") stands for contents of subtrees that are not shown.

## **3. YANG Model for Client-layer Tunnel**

### **3.1. YANG Tree for Ethernet Tunnel**

```
module: ietf-eth-te-tunnel
augment /te:te/te:tunnels/te:tunnel/te:config:
  +-rw src-eth-tunnel-endpoint
  |  +-rw vlanid?      etht-types:vlanid
  |  +-rw tag-type?    etht-types:eth-tag-type
  +-rw dst-eth-tunnel-endpoint
  |  +-rw vlanid?      etht-types:vlanid
  |  +-rw tag-type?    etht-types:eth-tag-type
  +-rw bandwidth-profile
    +-rw bandwidth-profile-name?  string
    +-rw bandwidth-profile-type? etht-types:bandwidth-profile-type
    +-rw CIR?                  uint64
    +-rw CBS?                  uint64
    +-rw EIR?                  uint64
    +-rw EBS?                  uint64
    +-rw color-aware?          boolean
    +-rw coupling-flag?        boolean
augment /te:te/te:tunnels/te:tunnel/te:state:
  +-ro src-eth-tunnel-endpoint
  |  +-ro vlanid?      etht-types:vlanid
  |  +-ro tag-type?    etht-types:eth-tag-type
  +-ro dst-eth-tunnel-endpoint
  |  +-ro vlanid?      etht-types:vlanid
  |  +-ro tag-type?    etht-types:eth-tag-type
  +-ro bandwidth-profile
    +-ro bandwidth-profile-name?  string
    +-ro bandwidth-profile-type? etht-types:bandwidth-profile-type
    +-ro CIR?                  uint64
    +-ro CBS?                  uint64
    +-ro EIR?                  uint64
    +-ro EBS?                  uint64
    +-ro color-aware?          boolean
    +-ro coupling-flag?        boolean
```

<CODE ENDS>

#### **4.2. Other Client-layer Tunnel YANG Code**

TBD.

### **5. Considerations and Open Issue**

Editor Notes: This section is used to note temporary discussion/conclusion that to be fixed in the future version, and will be removed before publication. This is a part of L2 work, need to discuss how to go with other L2 network models. The expectation is to include all potential L2 TE part in this work.

### **6. IANA Considerations**

TBD.

### **7. Manageability Considerations**

TBD.

### **8. Security Considerations**

The data following the model defined in this document is exchanged via, for example, the interface between an orchestrator and a transport network controller. The security concerns mentioned in [[I-D.ietf-teas-yang-te](#)] also applies to this document.

The YANG module defined in this document can be accessed via the RESTCONF protocol defined in [[RFC8040](#)], or maybe via the NETCONF protocol [[RFC6241](#)].

## **9. Acknowledgements**

We would like to thank Igor Bryskin and Daniel King for their comments and discussions.
