This document defines a PHB (per-hop behavior) called Expedited Forwarding (EF). The PHB is a basic building block in the Differentiated Services architecture. EF is intended to provide a building block for low delay, low jitter and low loss services by ensuring that the EF aggregate is served at a certain configured rate. This document obsoletes [RFC 2598](#).

This document is a product of the Differentiated Services Working Group of the IETF.

This document is now a Proposed Standard Protocol.

This announcement is sent to the IETF list and the RFC-DIST list.
