Reclassification of [RFC 1863](#) to Historic
draft-ietf-idr-rfc1863-historic-00.txt

Status of this Memo

By submitting this Internet-Draft, I certify that any applicable patent or other IPR claims of which I am aware have been disclosed, and any of which I become aware will be disclosed, in accordance with [RFC 3668](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at <http://www.ietf.org/ietf/lid-abstracts.txt>.

The list of Internet-Draft Shadow Directories can be accessed at <http://www.ietf.org/shadow.html>.

This Internet-Draft will expire on December 3, 2004.

Abstract

This memo reclassifies [RFC 1863](#), A BGP/IDRP Route Server alternative to a full mesh routing, to Historic status. This memo also Obsoletes [RFC 1863](#).

1. Reclassification of [RFC 1863](#) to Historic

[RFC 1863](#) [1] describes the use of route servers as an alternative to BGP/IDRP full mesh routing.

Internet-Draft

[RFC 1863](#) to Historic

June 2004

In the context of this document the term "[RFC 1863](#) route server" is used to refer to a route server as specified in [RFC1863](#). Other uses of the term "route server" are outside the scope of this document.

Implementations of [RFC 1863](#) route servers do not exist, and are not used as an alternative to full mesh routing. Therefore the [RFC 1863](#) is reclassified to Historic status.

Current techniques that serve as an alternative to full mesh routing include BGP Route Reflectors [2], BGP Confederations [3] and the use of private AS numbers. IDRP for IP has never been standardized by the IETF and can be considered obsolete.

Other uses of (non-RFC1863) route servers, rather than as an alternative to full mesh routing as described by [RFC 1863](#), are expected to continue be used for multiple purposes, but are out of the scope of this memo.

2. Acknowledgements

Jeffrey Haas, John Scudder, Paul Jakma, and Yakov Rekhter provided

useful background information for the creation of this memo. Scott Bradner, Jeffrey Haas and Yakov Rekhter provided substantial feedback during the WG last call.

3. IANA Considerations

This memo includes no request to IANA.

[[Note to the RFC-Editor: this section should be removed prior to publication.]]

4. Security Considerations

Reclassifying [RFC 1863](#) has no security considerations.
