# CBOR Web Token (CWT)

draft-ietf-ace-cbor-web-token

Michael B. Jones
IETF 100, Singapore
November 2017

Status

- Current version draft-ietf-ace-cbor-web-token-09
- Completed 1st WGLC on -07 before IETF 99
- Since then, incorporated feedback on examples
  - CBOR diagnostic notation now used more extensively
- Examples have been validated by multiple parties
  - Most recently by Giri Mandyam
- Second WGLC under way
  - Ends on Wednesday, November 29th

One Issue Identified So Far
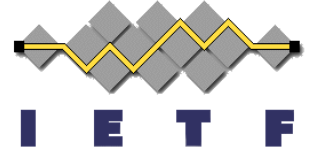

- Current audience description is ambiguous
  - Says that values are of type StringOrURI
  - Could be misinterpreted to not support multiple audiences, where that was not the intent
  - Need to clarify that the audience claim value is either an array of StringOrURI values or a single StringOrURI value (parallel to JWT "aud")

Next Steps
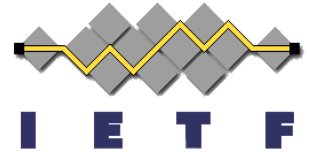

- People requested to do a thorough review
- Publish new version w/ WGLC feedback
- Hopefully then request publication
