

draft-ietf-dots-requirements-07

A. Mortensen, R. Moskowitz, T. Reddy

Changes since -06

- Attempt to address heartbeat concerns
- Incorporate WG feedback (mostly minor)
- No current issues open on GitHub tracker

Signal channel heartbeat concerns

- Zero-heartbeat mode desirable in some deployments
- Need heartbeat rate flexibility during peacetime to reduce load on server
- -07 attempts to create space for both of these considerations
- Heartbeat rate **MUST** maintain NAT bindings when mitigation active, flexible in peace-time

Remaining issues?

- NAT discussion: Any impact on requirements?
- Black-/white-list conflict resolution?
- ACL ordering?

Remaining work

- WGLC...

Thank you
