

In-situ OAM (IOAM)

IETF 100 Hackathon

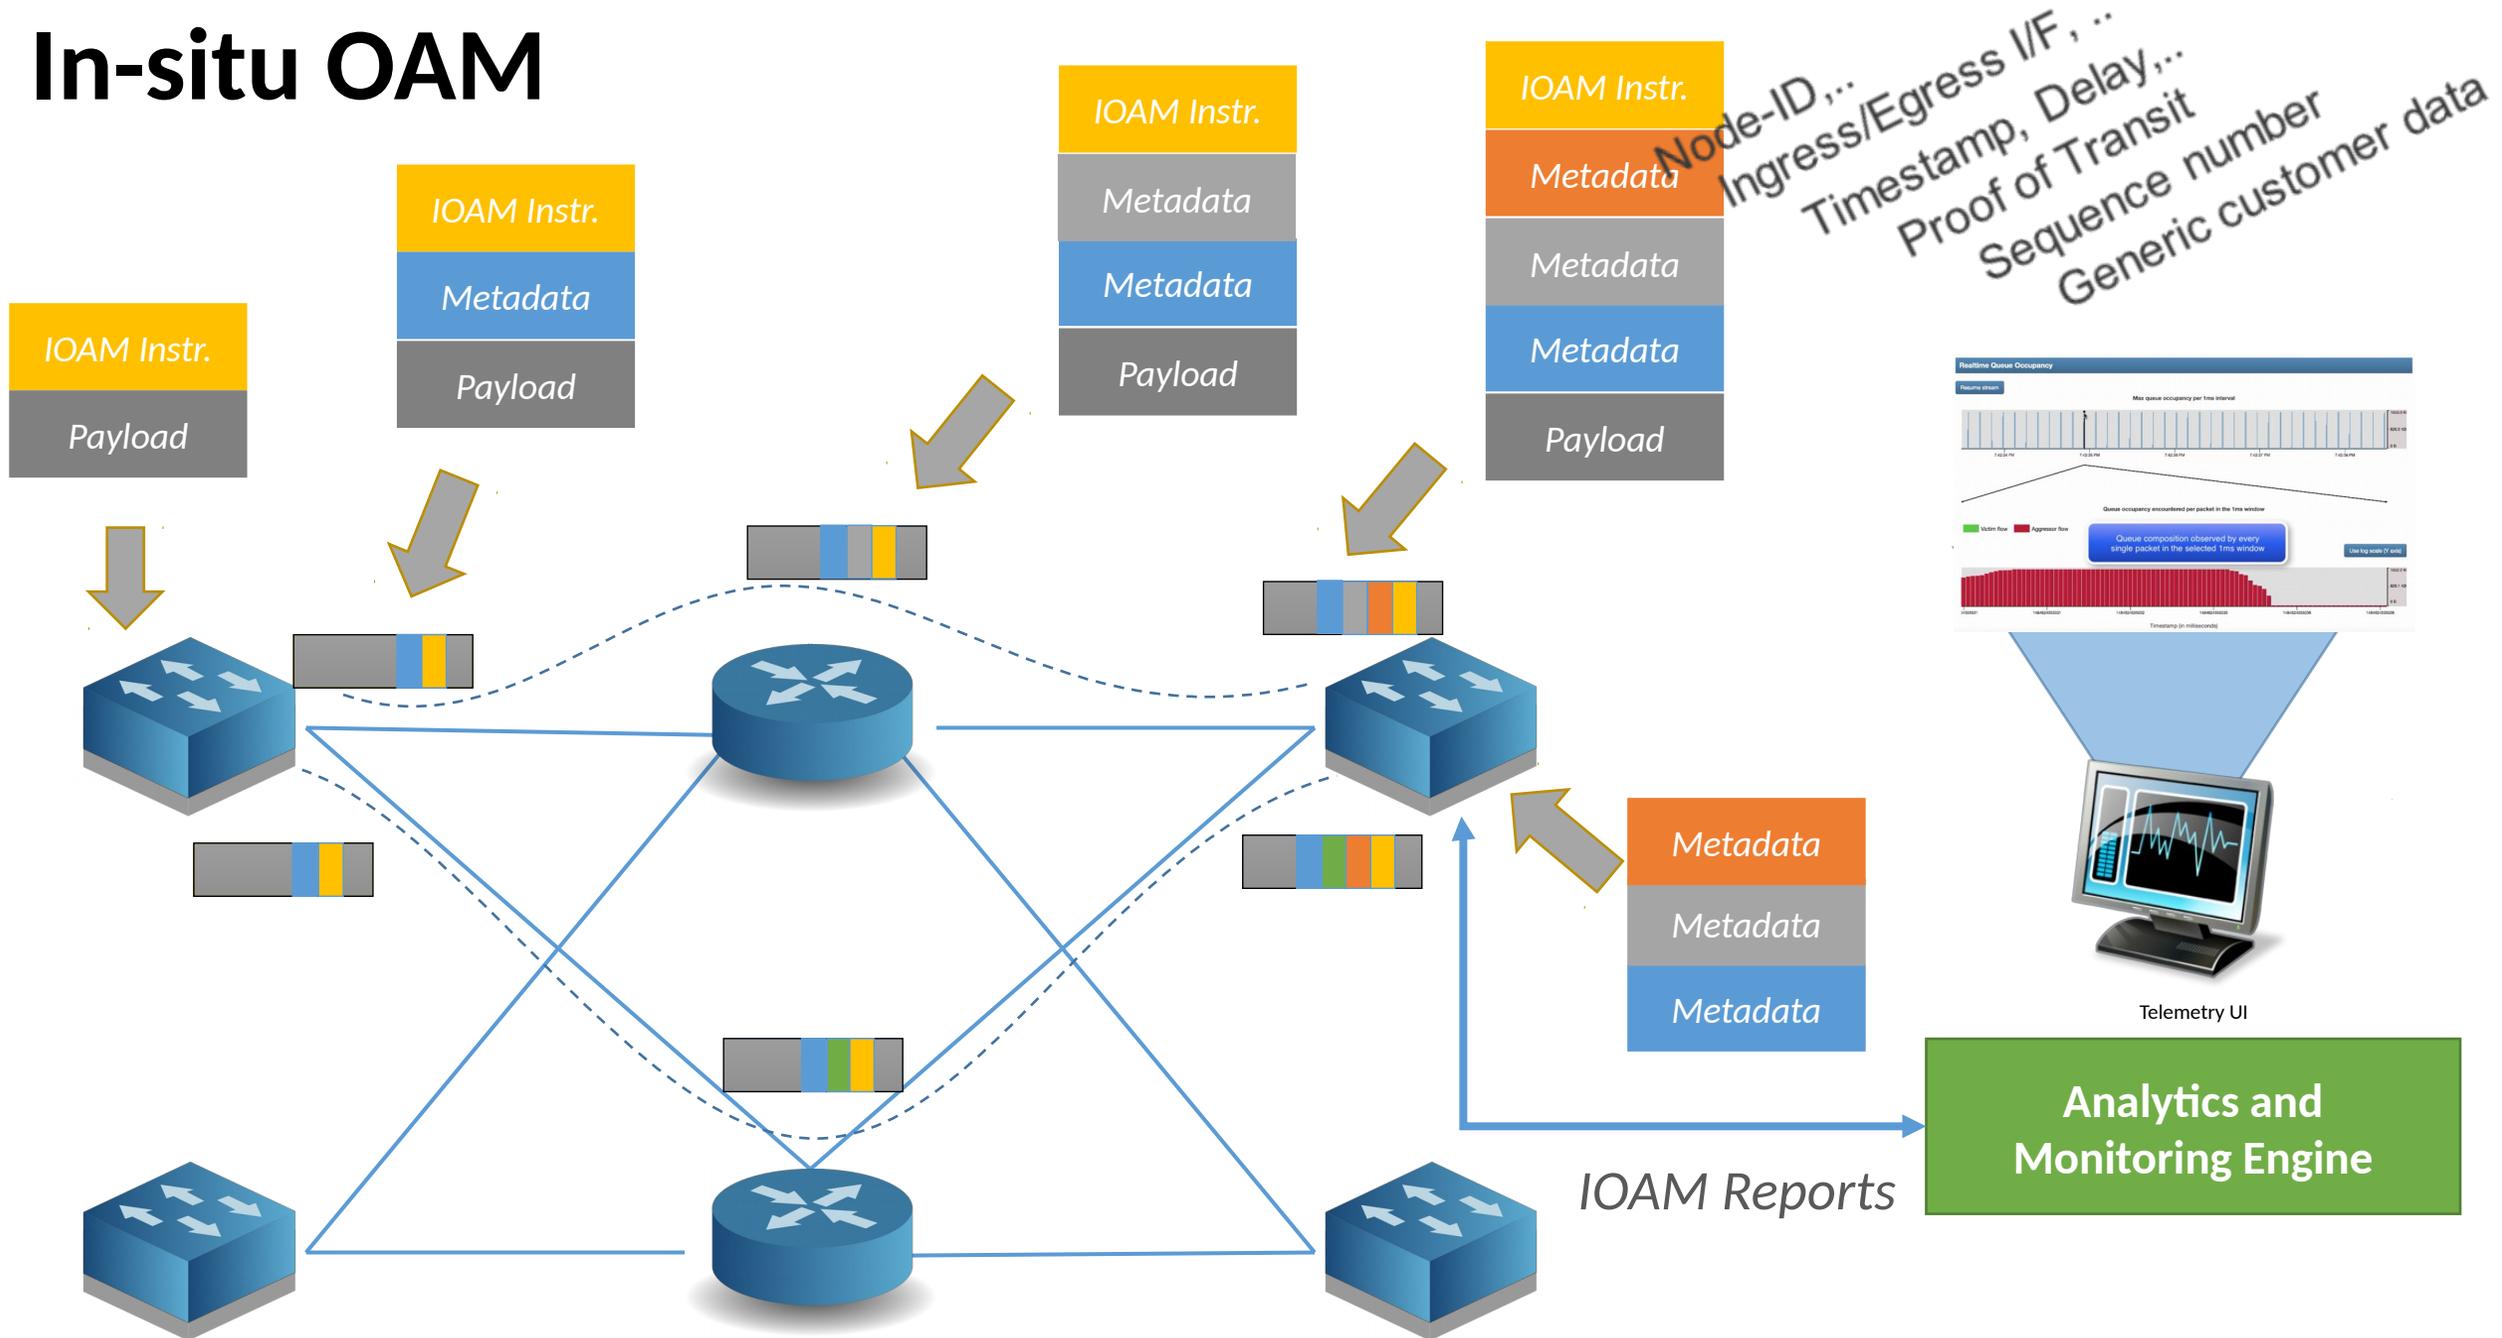

<https://tools.ietf.org/html/draft-ietf-ippm-ioam-data>

November 11-12 2017

Team

- Aditya Dogra @ Cisco << *First time at hackathon and IETF*
- Kai Lu @Huawei
- Manish Kumar (Remote) @ Fire eye << *First time at hackathon*
- Mickey Spiegel @ Barefoot << *First time at hackathon*
- Shwetha Bhandari @ Cisco
- Yap Chern Nam @ Temasek Polytechnic

In-situ OAM

Benefits of IOAM

Complete network visibility

No black boxes, silent drops and guessing.

Real-time monitoring

No need to depend on polling

Per-packet metadata

No sifting through aggregated counters and information

Full line rate, zero switch CPU involvement

Not limited by control plane bandwidth

<https://tools.ietf.org/html/draft-ietf-ippm-ioam-data>

<https://tools.ietf.org/html/draft-brockners-ioam-vxlan-gpe>

<https://tools.ietf.org/html/draft-brockners-inband-oam-transport>

Goals

- Encapsulation in multiple protocols
- Hardware implementation
- Interop between P4 and VPP data plane

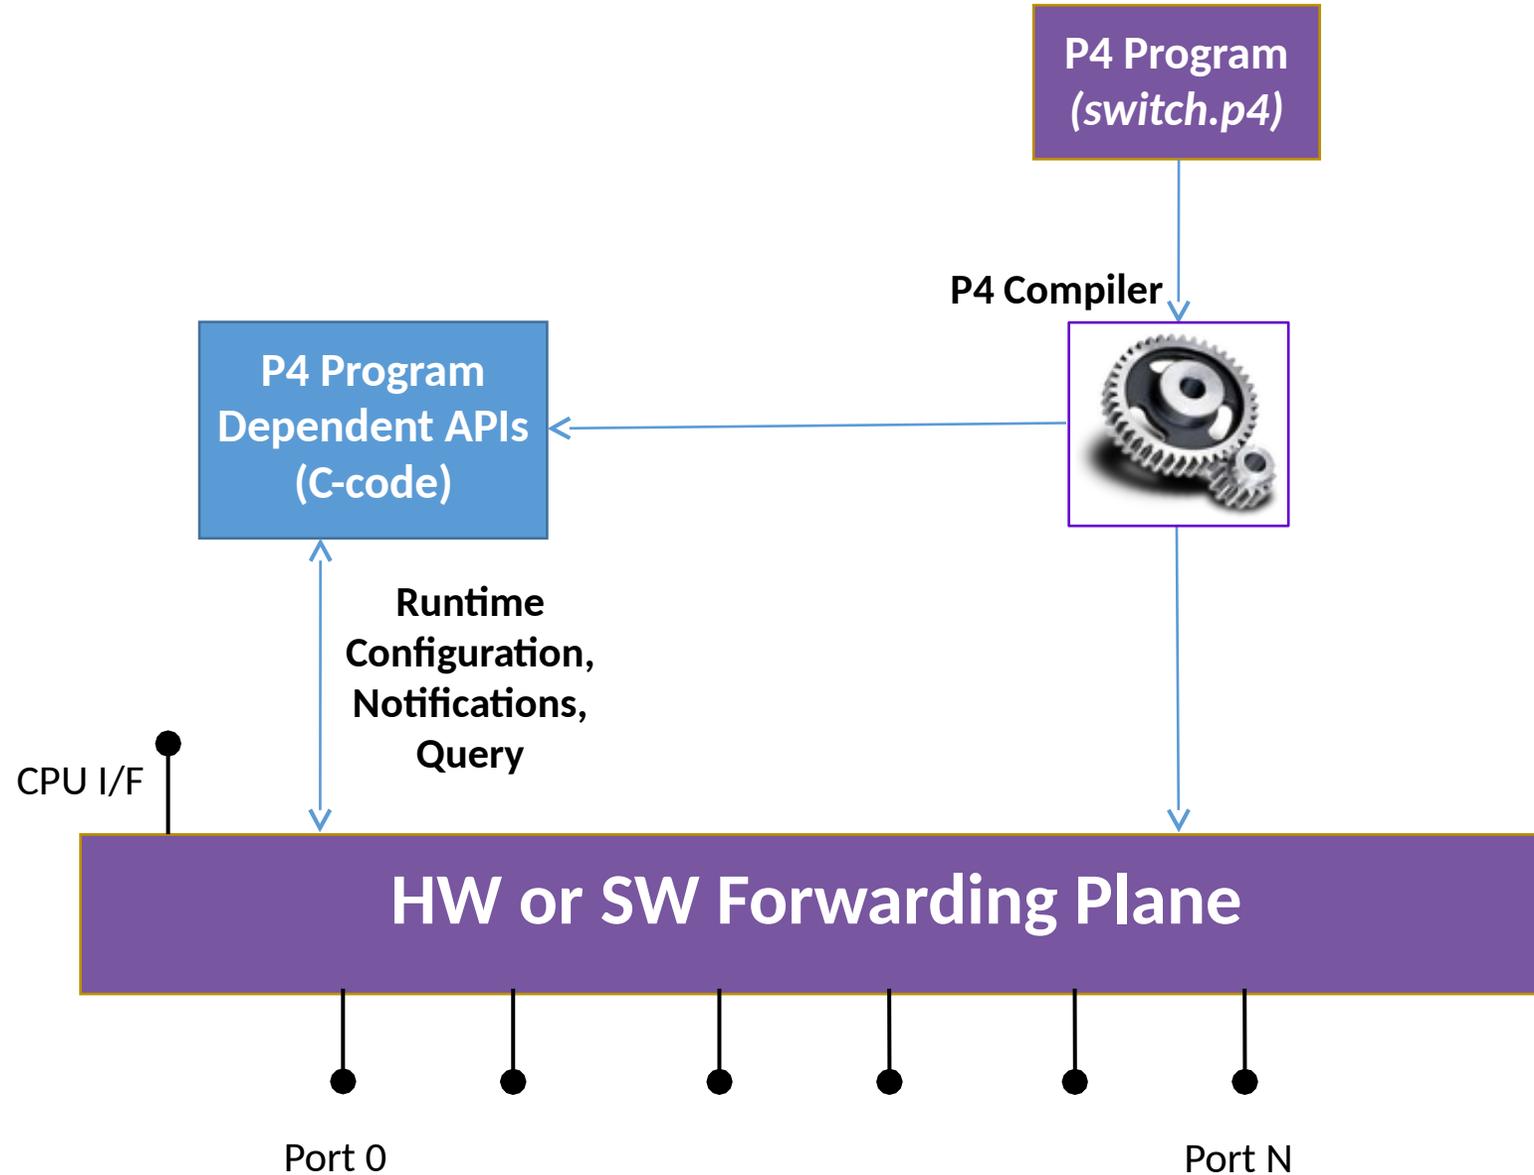

Results

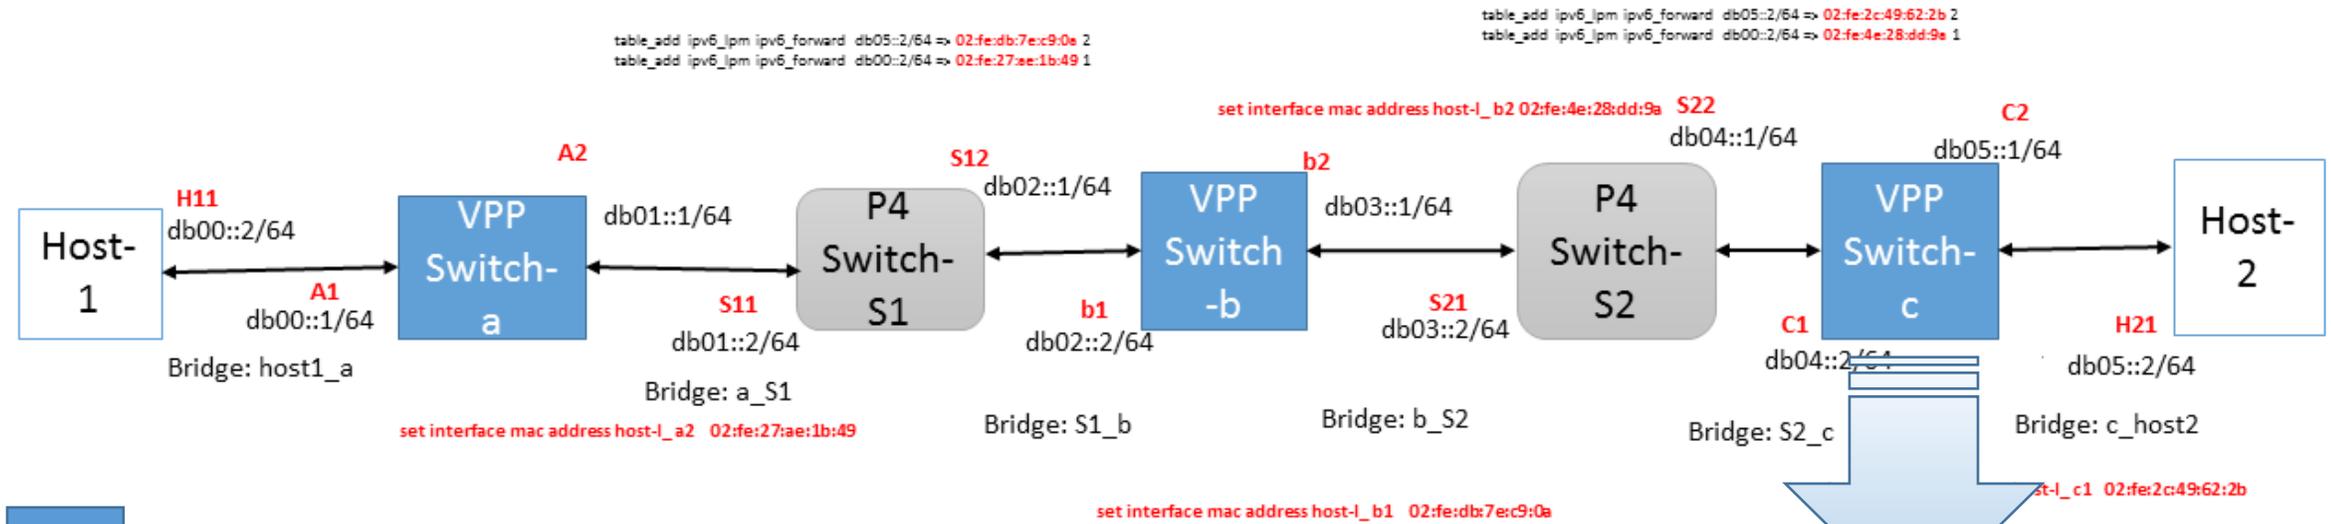

- IPv6 implementations
 - P4
 - VPP
 - Interop
- VXLAN-GPE implementation in P4
 - Performance tested on Barefoot Tofino

Programmable Forwarding Plane

VPP

P4

```

00:20:00:308461: ip6-hop-by-hop
IP6_HOP_BY_HOP: next index 12 len 64 traced 64 (Incr) Trace Type 0x9 , 2 max elts
[0] ttl 0x3d node id 0x4 ts 0x81c0b6b

[1] ttl 0x3f node id 0x2 ts 0xaff214c

(Pre-alloc) Trace Type 0x9 , 0 elts left
[0] ttl 0x3c node id 0x5 ts 0x5a0767ef

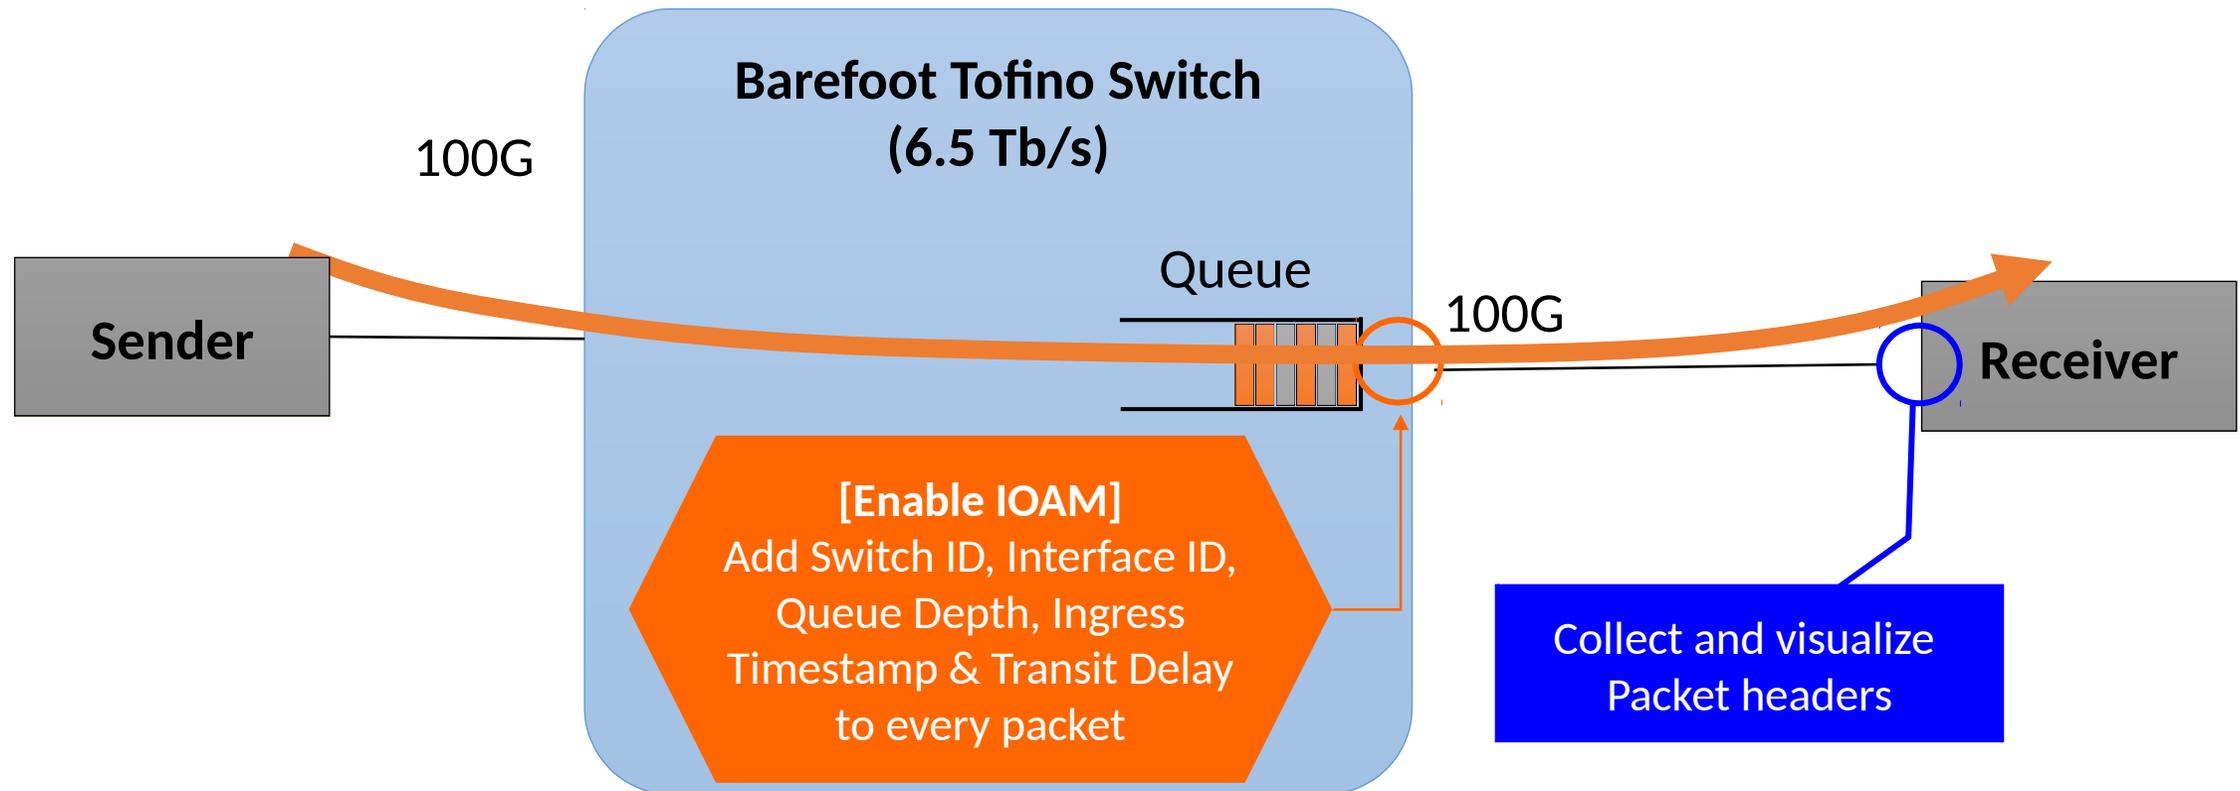

[1] ttl 0x3e node id 0x3 ts 0x5a076801

[2] ttl 0x40 node id 0x1 ts 0x5a0767f6
  
```

IOAM Incremental Trace on **BAREFOOT** Tofino Switch

NETWORKS

- Modified existing implementation of P4.org In-band Network Telemetry (INT) spec
- Support IOAM data and transport encapsulation formats
- Change in p4 code \Rightarrow change in HW behavior \Rightarrow IOAM at 6.5 Tb/s

```
