draft-tenoever-hrpc-political-02 (some updates and thoughts)

Amelia Andersdotter, ARTICLE19

Singapore, November 17, IETF

- Different schools of thoughts on standards, specifications and policies.
- Possible implications for the IETF.

Normative effects of IETF RFC's are already recognised
by/through the RFCs.

Normative effects of IETF RFC's are already recognised
by/through the RFCs.

RFC3935 (2004):
IETF prefers decentralised (open)
architectures. A mission
statement for the IETF.

Normative effects of IETF RFC's are already recognised by/through the RFCs.

RFC3935 (2004):
IETF prefers decentralised (open) architectures. A mission statement for the IETF.

RFC7231 (2014):
Revises a previously expressed concern about privacy (RFC2616), into a concern that balances privacy against other interesting uses of Referers [sic].

Changes

Section 5
Competition and collaboration. Organisational aspects of IETF and other standards groups. Typical challenges, incentives.

Changes

Section 5
Competition and collaboration. Organisational aspects of IETF and other standards groups. Typical challenges, incentives.

Section 9 (formerly 10)
Remove references to "protocol police" (we wouldn't clarify that ducks don't bark). Add reflections on normative effects of IETF standards. MIME exemplifies how implementors do enjoy any freedom they wish. But RFCs, for instance TLS or DNSSEC, can make it into enforceable policy (i.e. enforced by non-IETF entities).

Section 5
Competition and collaboration. Organisational aspects of IETF and other standards groups. Typical challenges, incentives.

Section 9 (formerly 10)
Remove references to "protocol police" (we wouldn't clarify that ducks don't bark). Add reflections on normative effects of IETF standards. MIME exemplifies how implementors do enjoy any freedom they wish. But RFCs, for instance TLS or DNSSEC, can make it into enforceable policy (i.e. enforced by non-IETF entities).

Section 10 (formerly 11)
Discussing normative (in the political sense) effects of individual standards.

Questions:

Should this document be adopted as a draft?

Seeking examples of IETF standards gaining wide-spread normative recognition from actors external to the IETF?
