

# **Applicability of Interfaces to Network Security Functions to Networked Security Services** **(draft-ietf-i2nsf-applicability-01)**

**IETF 100, Singapore  
November 14, 2017**

**Jaehoon (Paul) Jeong, Sangwon Hyun, Tae-Jin Ahn,  
Susan Hares, and Diego Lopez**

# Motivation of This Draft

## ❖ I2NSF Applicability

- I2NSF **Chartered Working Item**
- This draft explains **how I2NSF framework and interfaces can be used** for real network security services.

## ❖ Contents

- **Security service procedure in I2NSF framework**
- **Use Case: Time-dependent web access control**
  - **Firewall & Web filter**

# I2NSF Framework

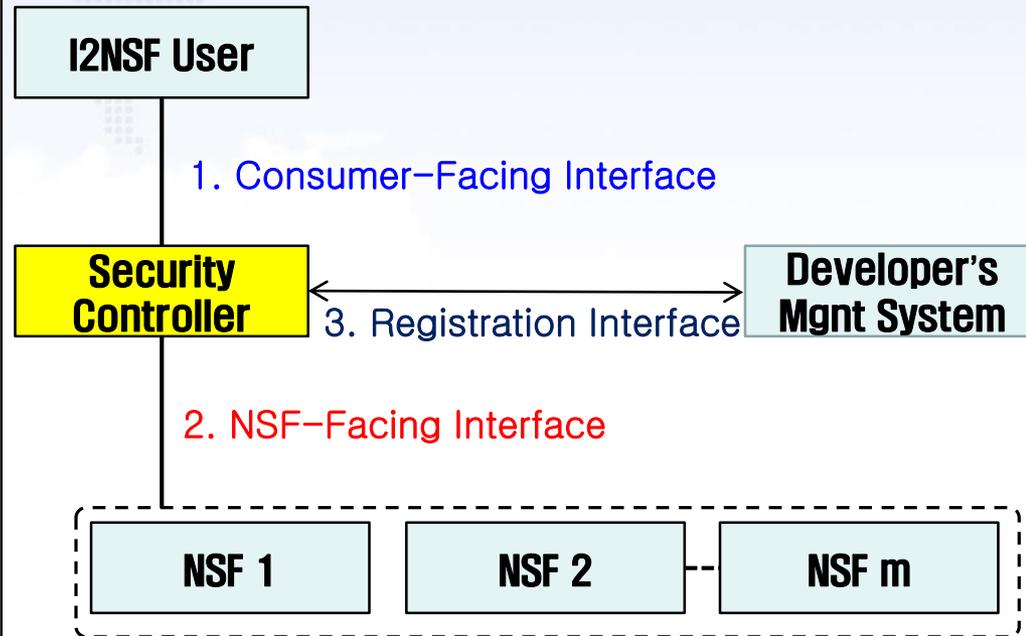

I2NSF Framework for user-friendly and efficient security service provisioning

1. **I2NSF User** asks for security services with high-level security policies to **Security Controller** via **Consumer-Facing Interface**.

2. **Security Controller** delivers low-level security policies to **NSFs** via **NSF-Facing Interface**.

3. **Network Security Function** configures such low-level security policies into its local system.

4. **Developer's Mgmt System** registers the capabilities of **NSFs** via **Registration Interface**.

# Information and Data Models for I2NSF

## ❖ Consumer-Facing Interface

- Information Model
  - draft-kumar-i2nsf-client-facing-interface-im-04
- Data Model
  - draft-jeong-i2nsf-consumer-facing-interface-dm-04

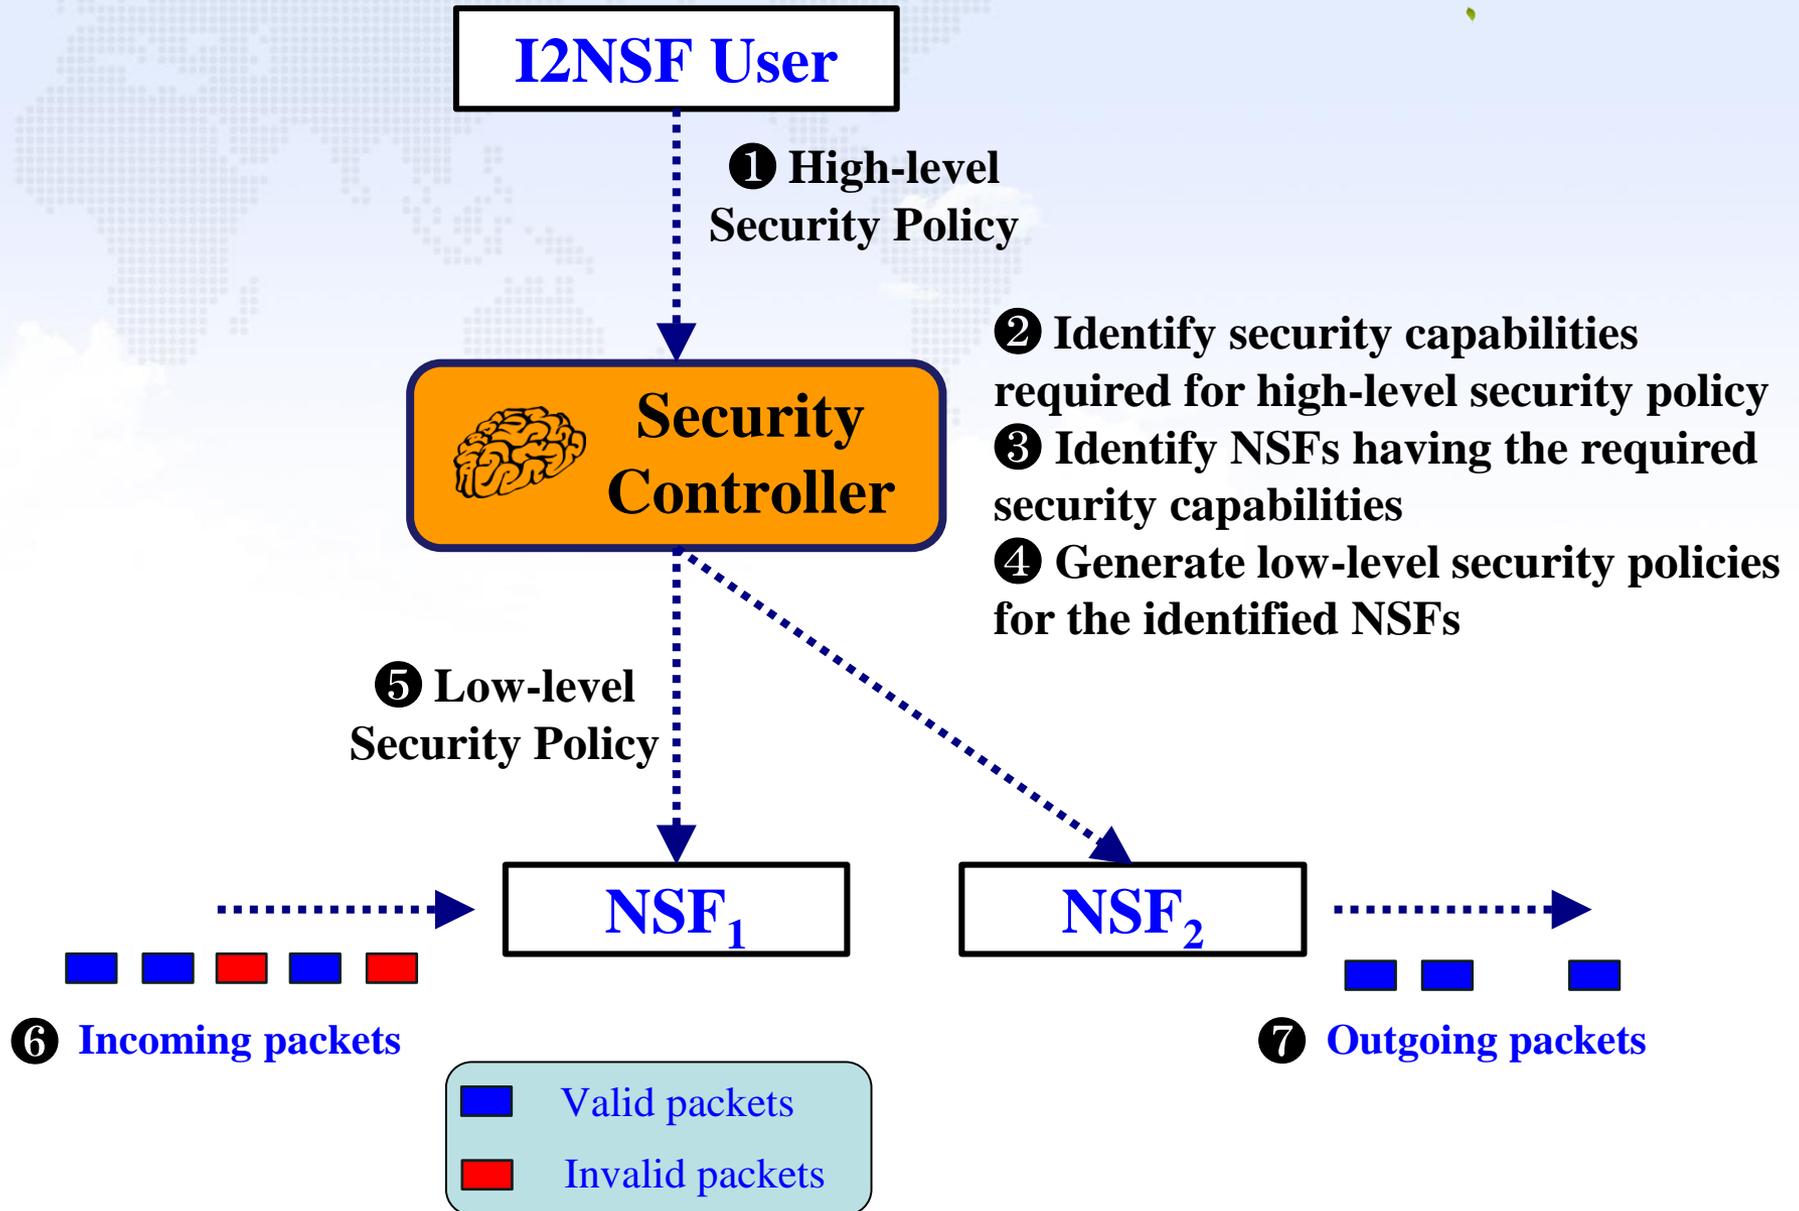

## ❖ NSF-Facing Interface

- Information Model
  - draft-ietf-i2nsf-capability-00
- Data Model
  - draft-kim-i2nsf-nsf-facing-interface-data-model-04

## ❖ Registration Interface

- Information Model
  - draft-hyun-i2nsf-registration-interface-im-03
- Data Model
  - draft-hyun-i2nsf-registration-interface-dm-02

# Security Service Procedure in I2NSF Framework

# Use Case: Time-dependent Web Access Control

**I2NSF User**

**①** Block the access of staff to Facebook from 9am to 6pm

**Security  
Controller**

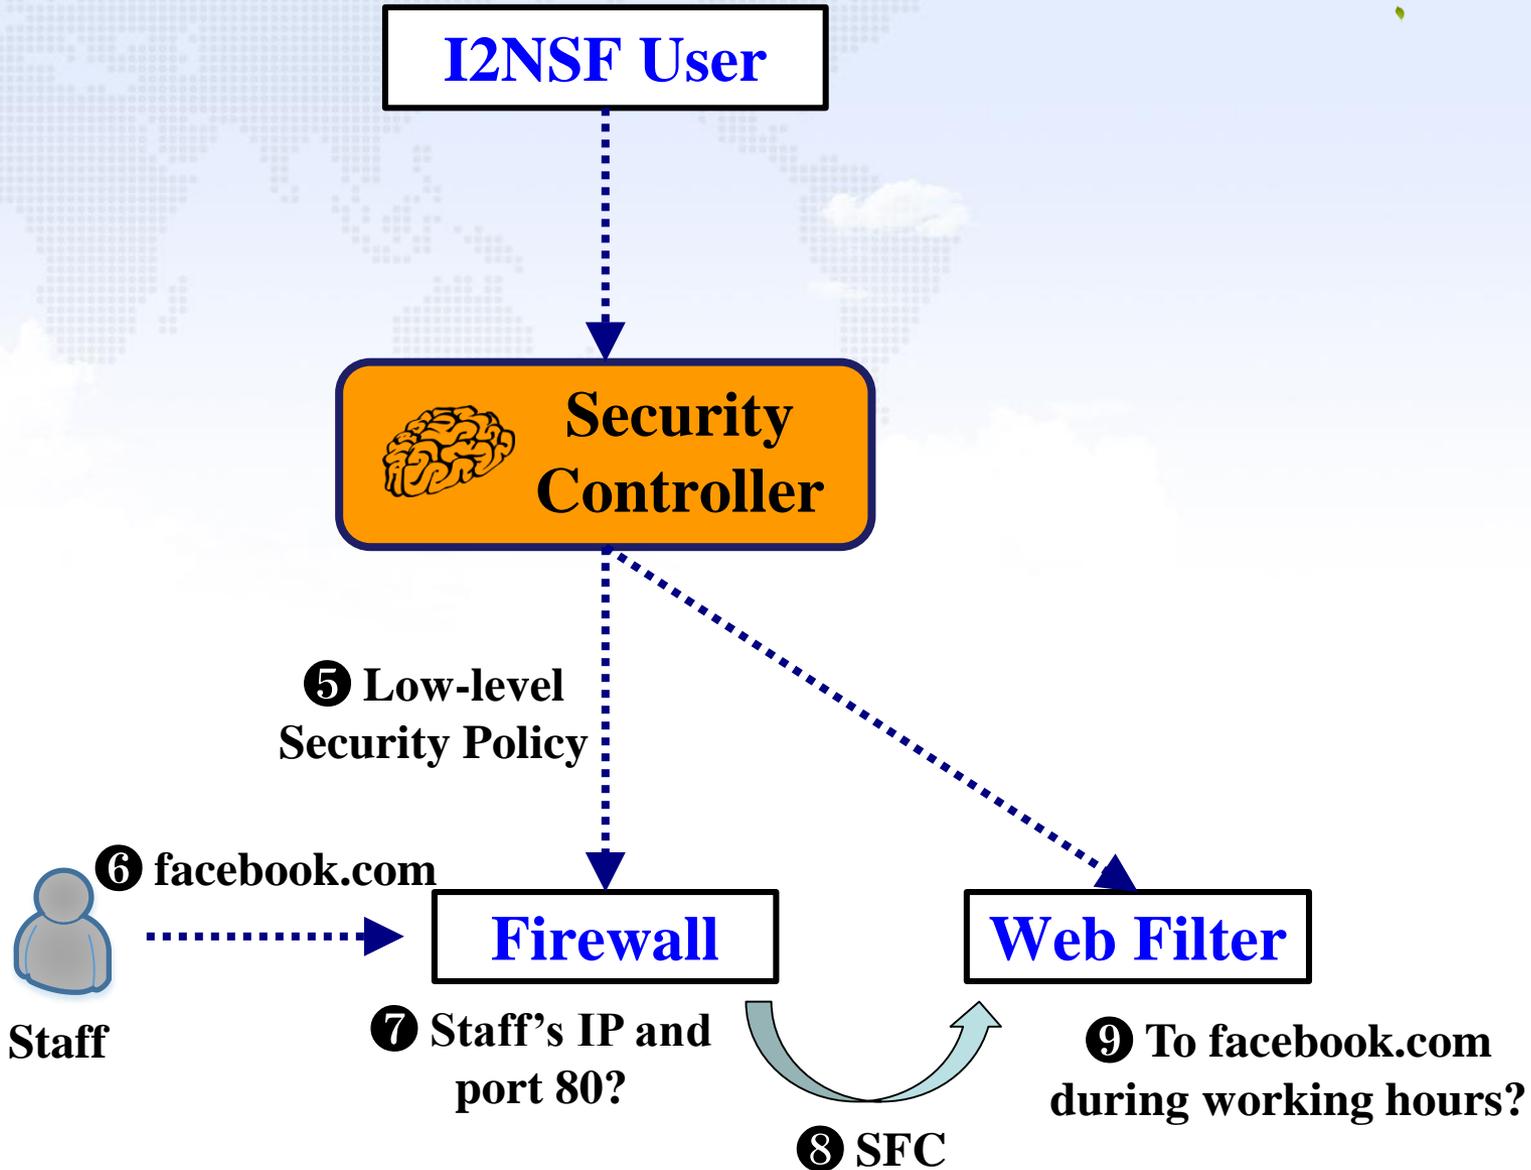

**② ③** Required security capabilities and NSFs

➤ IP address and port number inspection → Firewall

➤ URL inspection and time check → Web filter

**④** Generate low-level security policies for Firewall and Web filter

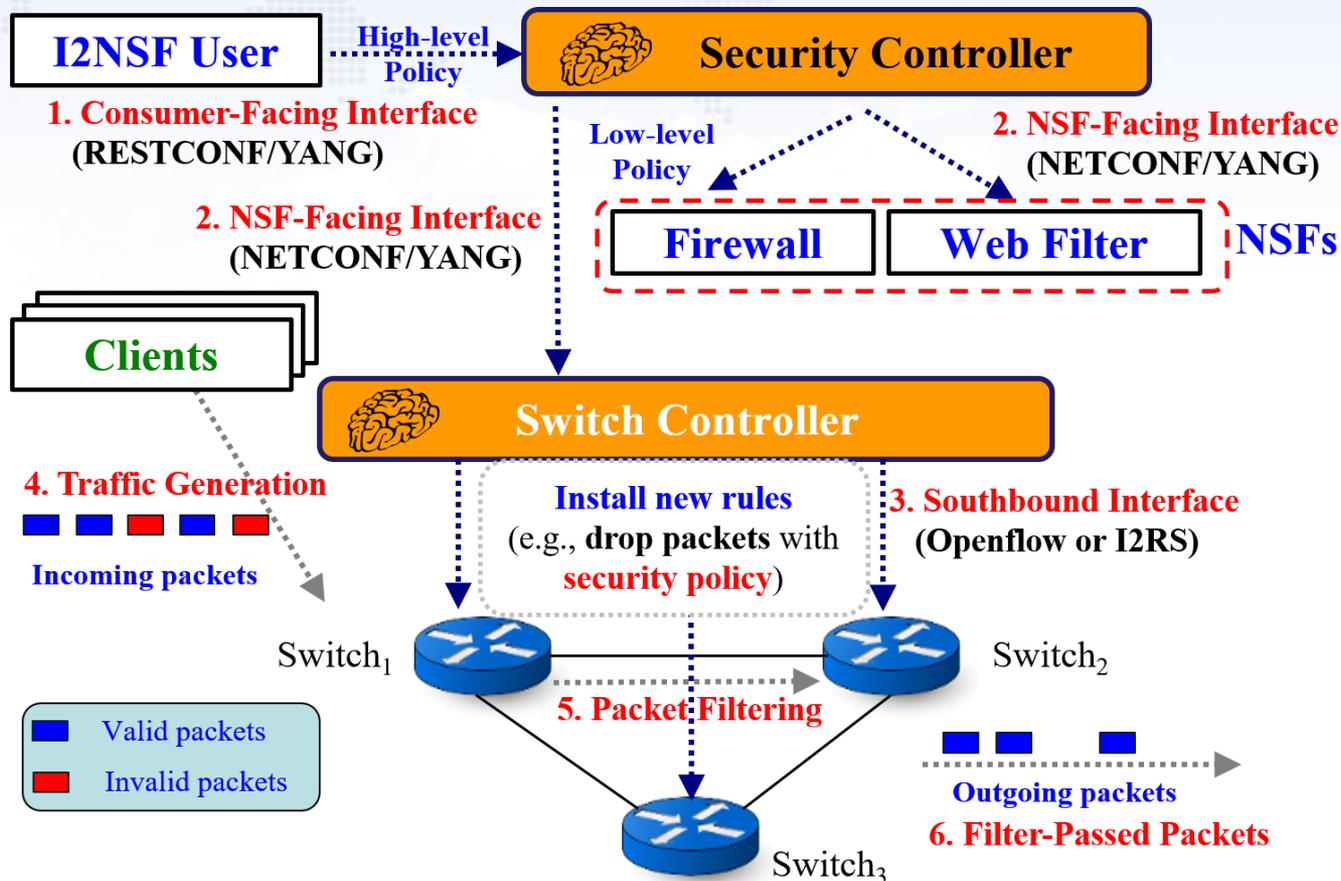

# Use Case: Time-dependent Web Access Control

# Combination of I2NSF and SDN

## ❖ Accelerated Security Service

- Simple packet filtering rules by SDN switch
- Complicated security inspection by NSFs

# Update from -00 Version

- ❖ The following changes have been made from draft-ietf-i2nsf-applicability-00.
  - In **Section 3, time-based web access control service** is added as a general use case in the I2NSF framework.
  - In **Section 4, we explained the I2NSF framework with SDN to support the divided security policy enforcement** for efficient security service.
  - In **Section 4.2, the centralized VoIP/VoLTE security system is clarified as a use case to explain the security service chaining** using SFC.

# Next Steps

- ❖ **Reflection of new use cases of I2NSF**
  - This draft will be extended with new use cases.
  - This draft will be described in more detail with the experience and lessons from IETF I2NSF Hackathon Project.
- ❖ **Plan: WGLC at IETF 101?**
- ❖ **Welcome your Feedback!**
