IS-IS TE Link Enablement Discussion

Christian E. Hopps *<chopps@chopps.org>*

TE Link Enablement

Adoption Poll

- About complete need any last points.
- Main points gathered:
  - Supporting
    - Better to be explicit and not implicit.
  - Against
    - Just use draft-ietf-isis-te-app-03 and continue to use implicit enabled based on presence of data although data is now specifically marked as RSVP.

3 Questions

- Do we need to locally advertise data for an application that may or may not be enabled locally?

- Can we imagine implementing/deploying only 1 of the drafts?

- Do we really need it, or should we wait until we do?
