draft-ietf-netvc-testing-06

Thomas Daede
2017-11-15

Changes

- Small command line changes
- Test scenarios

CLI parameters

- aomenc CLI relaxed to remove lag-in-frames parameter for high delay, encoder expected to use a large value by default

- Change motivated by encoder improvements causing the previous setting (25) to be unnecessarily high

- `aomenc --end-usage=q --cq-level=x -lag-in-frames=25 -auto-alt-ref=2`

Test scenarios

- Previously, only very slowest encoder modes were allowed to be used

- aomenc becomes very slow in this mode, hence it is now allowed to turn off some of the slowest searches (ext-partitions, ext_partition_types)

- Only allowed for aomenc ↔ aomenc comparisons
