Draft Geneve update

IETF 100, NVO3 WG meeting, Singapore
Geneve Authors
Presented by Ilango Ganga (Editor)

Nov 15, 2017
Draft Geneve -05 update

• Draft Geneve was updated on Sep 13\textsuperscript{th} with the following changes based on WG discussions and DT recommendations
  • [draft-ietf-nvo3-geneve-05](https://example.com/
h\textsuperscript{th} with the following changes based on WG discussions and DT recommendations
  • Section 3.2: Added clarifications on the use of Critical options bit, helpful in options processing in HW
  • Section 4.1.1. Added additional description on best practices to prevent fragmentation and an informative reference to PWE3 that provides similar recommendations on fragmentation
  • Updated References (multiple sections)
Comments on mailing list discussion

• Alternate marking proposal for performance measurements
  • Use Geneve extensibility for performance measurement or similar use cases
  • Also Options are not constrained, hence such proposals can independently evolve as an extension (e.g. IOAM)
  • Feedback from WG and consensus needed before effecting a change
Next Steps

• Working to add additional description on security best practices to the security considerations section (6)
