

OAuth 2.0 Authorization Server Discovery Metadata

draft-ietf-oauth-discovery

Mike Jones
IETF 100, Singapore
November 2017

Document Status

- Current draft is [draft-ietf-oauth-discovery-07](#)
 - -07 incorporated clarifications of defaults and the use of TLS suggested by EKR
- Publication of -07 was requested
 - Received SecDir, OpsDir, GenArt, & Designated Expert reviews
- OpsDir and GenArt said “ready” and SecDir identified a nit
- Mark Nottingham, as an IANA Designated Expert, requested clarifications of specific language about the use of the .well-known value (and he approved its registration)
- I expect to publish -08 this week, incorporating the requested clarifications
- At that point, I think we’ll be ready for the IESG telechat
