YANG Data Model
for IEEE 1588v2

draft-ietf-tictoc-1588v2-yang-06

Yuanlong Jiang, jiangyuanlong@huawei.com
Xian Liu, lene.liuxian@foxmail.com
Jinchun Xu, xujinchun@huawei.com
Rodney Cummings, rodney.cummings@ni.com

100th IETF - Singapore
Status of the draft

- **Last call of draft-ietf-tictoc-1588v2-yang-05**
  - Received quite a lot of good suggestions & comments from TICTOC, NETMOD and IEEE 1588 participants
  - All suggestions & comments are carefully considered, and the resolutions are well discussed on the lists

- **Update to draft-ietf-tictoc-1588v2-yang-06**
  - All LC resolutions in consensus are incorporated
  - Most groupings are dropped, and their codes are moved to containers respectively
  - The module tree has gone through a few changes
Module name is simplified;
Add a top root node "ptp"
Remove port-identity
4. port-number is a uint16 now
5. Reuse clock-identity in default-ds
6. port-number is a uint16 now
7. Remove port-identity
8. clock-identity inserted
Next Step

- After the LC period and after publication of the new revision 06, we received a couple of more comments
  - Purely editorial or explanatory ones will be reflected in the next revision
  - Regarding to introductory texts, no dramatic change is needed
- Do we need another WG Last Call? Or send it to IESG for approval?
Thank You
