draft-ietf-bfd-yang-11

Changes since draft-ietf-bfd-yang-05

* Addressed comments from WGLC and YANG Doctor review:
  * Grouping (BFD parameters) for BFD clients to use. Useful for IGPs which auto-discover their peers
  * Security considerations section
  * Added a container around lists. E.g. we previously had "list sessions", now we have "container sessions" which has "list session"
  * Added working XML examples (validated with yanglint)
  * Various clarifications, nits etc

Next steps

* Address comments (mostly minor/nits) from YD on rev 11
* Address issues/comments in shepherd write-up
