draft-ietf-bfd-yang-11
Changes since draft-ietf-bfd-yang-05

- Addressed comments from WGLC and YANG Doctor review:
  - Grouping (BFD parameters) for BFD clients to use. Useful for IGPs which auto-discover their peers
  - Security considerations section
  - Added a container around lists. E.g. we previously had “list sessions”, now we have “container sessions” which has “list session”
  - Added working XML examples (validated with yanglint)
  - Various clarifications, nits etc
Next steps

- Address comments (mostly minor/nits) from YD on rev 11
- Address issues/comments in shepherd write-up
