

refuse-any

IETF 101
Lahndan, UK

Progress

- draft-ietf-dnsop-refuse-any-06 published on March 5
 - editorial changes
 - QTYPE=RRSIG advice softened
 - update 1034 and 1035
 - define "conventional ANY response"
 - note lack of signalling capability in the subset mode response

Lingering Controversy

- General nose-wrinkling at the unpleasant smell
 - the smell is indeed not entirely fragrant
 - dealing with ANY queries is also not universally palatable
 - the authors suggest people just continue holding their noses
- Authors believe that all WGLC comments have now been addressed

Next Steps
