

I2NSF Capability YANG Data Model

(draft-hares-i2nsf-capability-data-model-06)

IETF 101, London
March 21, 2018

Susan Hares, Jaehoon Paul Jeong, Jinyong (Tim) Kim [Presenter], Robert Moskowitz, and Qiushi Lin

Updates from the Previous Version

- The Previous Draft:
 - draft-hares-i2nsf-capability-data-model-05
- This draft defines a YANG Data Model (DM) corresponding to the Information Model (IM) for NSF-Facing Interface and Registration Interface.
 - draft-ietf-i2nsf-capabilities-00
 - draft-ietf-i2nsf-nsf-facing-interface-dm-00
 - draft-hyun-i2nsf-registration-interface-im-04

List of Changes

- Modification of Time Zone
- Addition of Port Number to Condition Clause
- Object-Oriented Features (Ongoing)

Modification of Time Zone

- We added not only an **absolute time zone** but also a **periodic time zone** to net-sec-capabilities.

```
+--rw i2nsf-net-sec-caps
    +-rw net-sec-capabilities* [nsc-capabilities-name]
        +-rw nsc-capabilities-name      string
    +-rw time-zone
        | +-rw time?    boolean
        | +-rw date?    boolean
```

```
+--rw i2nsf-net-sec-caps
    +-rw net-sec-capabilities* [nsc-capabilities-name]
        +-rw nsc-capabilities-name      string
        +-rw rule-description?        boolean
        +-rw rule-rev?                boolean
        +-rw rule-priority?          boolean
    +-rw time-zone
        | +-rw absolute-time-zone
        | | +-rw time?    boolean
        | | +-rw date?    boolean
        | +-rw periodic-time-zone
        |   +-rw day?      boolean
        |   +-rw month?    boolean
```

Addition of Port Number to Condition Clause

- We added a **port number** to a **condition clause**.

```
|   |   +-rw packet-security-tcp-condition  
|   |   |   +-rw pkt-sec-cond-tcp-seq-num?      boolean  
|   |   |   +-rw pkt-sec-cond-tcp-ack-num?      boolean  
|   |   |   +-rw pkt-sec-cond-tcp-window-size?  boolean  
|   |   |   +-rw pkt-sec-cond-tcp-flags?        boolean  
|   |   +-rw packet-security-udp-condition  
|   |   |   +-rw pkt-sec-cond-udp-length?    boolean
```

```
|   |   +-rw packet-security-tcp-condition  
|   |   |   +-rw pkt-sec-cond-tcp-src-port?      boolean  
|   |   |   +-rw pkt-sec-cond-tcp-dest-port?      boolean  
|   |   |   +-rw pkt-sec-cond-tcp-seq-num?      boolean  
|   |   |   +-rw pkt-sec-cond-tcp-ack-num?      boolean  
|   |   |   +-rw pkt-sec-cond-tcp-window-size?  boolean  
|   |   |   +-rw pkt-sec-cond-tcp-flags?        boolean  
|   |   +-rw packet-security-udp-condition  
|   |   |   +-rw pkt-sec-cond-udp-src-port?      boolean  
|   |   |   +-rw pkt-sec-cond-udp-dest-port?    boolean  
|   |   |   +-rw pkt-sec-cond-udp-length?    boolean
```

Next Steps

- We will change the current YANG data model to the YANG data model of **Object-Oriented (OO) Style**.
- We will verify the OO YANG data model by implementing a prototype in the next Hackathon.
