

LSR YANG Status

IETF 101, London

Derek Yeung, Arrcus
Yingzhen Qu, Huawei
Helen Chen, Jabil
Jeffrey Zhang, Juniper
Acee Lindem, Cisco

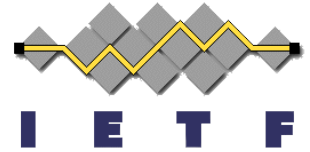

OSPF YANG Model

- Import **ietf-bfd-types** module and use **client-cfg-parms** based Reshad Rahman/Jeff Haas discussions.
- YANG Doctor Comments from Lada Lhotka and Martin Bjorkland
 - Use identities rather than enums and use **derived_from()** and **derived_from_or_self()** for **must()** and **when()** constraints (**ospf-protocol**, **ospf-lsa-type**, **area-type**)
 - Conform to RFC6087BIS recommendations of enums and identifiers
 - Better Descriptions for some identifiers
- Remove redundant AF list and instance container from **ospf** container – Now single **af** per instance and list is only at control plane level.
- Working Group Last Call Imminent – One more update

Others LSR YANG Models

- ISIS YANG Model - Next Priority
- OSPF/ISIS SR YANG Models – On backburner until we get other to IESG
