YANG Data Model for Layer 3 TE Topologies
draft-ietf-teas-yang-l3-te-topo-02

Abstract

This document defines a YANG data model for layer 3 traffic engineering topologies.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on January 2, 2019.

1. Introduction

This document defines a YANG [RFC7950] data model for describing the relationship between a layer 3 network topology [RFC8346] and a TE topology [I-D.ietf-teas-yang-te-topo].

When traffic engineering is enabled on a layer 3 network topology, there will be a corresponding TE topology. The TE topology may or

may not be congruent to the layer 3 network topology. When such a congruent TE topology exists, there will be a one-to-one association between the one modeling element in the layer 3 topology to another element in the TE topology. When such a congruent TE topology does not exist, the association will not be one-to-one. This YANG data model allows both cases.

1.1. Terminology

The keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in BCP 14, [RFC2119].

The following terms are defined in [RFC7950] and are not redefined here:

- o augment
- o data model
- o data node

1.2. Tree Diagrams

Tree diagrams used in this document follow the notation defined in [RFC8340].

2. Modeling Considerations for L3 TE Topologies

2.1. Relationship Between Layer 3 Topology and TE topology

In general, layer 3 network topology model and TE topology model can be used independently. When traffic engineering is enabled on a layer 3 network topology, there will be associations between objects in layer 3 network topologies and objects in TE topologies. The properties of these relations are:

- o The associations are between objects of the same class, i.e. node to node or link to link.
- o The multiplicity of such an association is: 0..1 to 0..1. An object in a layer 3 network may have zero or one associated object in the corresponding TE network.

2.2. Relationship Modeling

YANG data type leafref is used to model the association relationship between a layer 3 network topology and a TE topology. YANG must statements are used to enforce the referenced objects are in the topologies of proper type.

2.2.1. Topology Referencing

When TE is enabled on a layer 3 network topology, if the TE topology is not congruent to the layer 3 network topology, the layer 3 network topology will have a reference to the corresponding TE topology. Such a reference is modeled as follows:

```
augment /nw:networks/nw:network/l3t:l3-topology-attributes:
  +--rw l3-te-topology-attributes
    +--rw network-ref?    -> /nw:networks/network/network-id
```

If the TE topology is congruent to the layer 3 network topology, the above reference can still be used to specified TE parameters defined in the TE topology model.

2.2.2. Node Referencing

When TE is enabled on a layer 3 network topology, if the TE topology is not congruent to the layer 3 network topology, a layer 3 network node may have a reference to the corresponding TE node. Such a reference is modeled as follows:

```
augment /nw:networks/nw:network/nw:node/l3t:l3-node-attributes:
  +--rw l3-te-node-attributes
    +--rw node-ref?      leafref
    +--rw network-ref?   -> /nw:networks/network/network-id
```

2.2.3. Link Termination Point Referencing

When TE is enabled on a layer 3 network topology, if the TE topology is not congruent to the layer 3 network topology, a layer 3 link termination point may have a reference to the corresponding TE link termination point. Such a reference is modeled as follows:

```
augment /nw:networks/nw:network/nw:node/nt:termination-point
  /l3t:l3-termination-point-attributes:
  +--rw l3-te-tp-attributes
    +--rw tp-ref?        leafref
    +--rw node-ref?      leafref
    +--rw network-ref?   -> /nw:networks/network/network-id
```

2.2.4. Link Referencing

When TE is enabled on a layer 3 network topology, if the TE topology is not congruent to the layer 3 network topology, a layer 3 link may have a reference to the corresponding TE link. Such a reference is modeled as follows:

```
augment /nw:networks/nw:network/nt:link/l3t:l3-link-attributes:
  +--rw l3-te-link-attributes
    +--rw link-ref?      leafref
    +--rw network-ref?   -> /nw:networks/network/network-id
```

2.3. Topology Type Modeling

A new topology type is defined in this document, to indicate a topology that is a layer 3 topology with TE enabled.

```
augment /nw:networks/nw:network/nw:network-types
  /l3t:l3-unicast-topology:
  +--rw l3-te!
```

3. Packet Switching Technology Extensions

3.1. Technology Specific Link Attributes

The technology agnostic TE Topology model is augmented with packet switching specific link attributes:

```
augment /nw:networks/tet:te/tet:templates/tet:link-template
  /tet:te-link-attributes
  /tet:interface-switching-capability:
  +--rw packet-switch-capable
    +--rw minimum-lsp-bandwidth?  rt-types:bandwidth-ieee-float32
    +--rw interface-mtu?          uint16
augment /nw:networks/nw:network/nt:link/tet:te
  /tet:te-link-attributes
  /tet:interface-switching-capability:
  +--rw packet-switch-capable
    +--rw minimum-lsp-bandwidth?  rt-types:bandwidth-ieee-float32
    +--rw interface-mtu?          uint16
augment /nw:networks/nw:network/nt:link/tet:te
  /tet:information-source-entry
  /tet:interface-switching-capability:
  +--ro packet-switch-capable
    +--ro minimum-lsp-bandwidth?  rt-types:bandwidth-ieee-float32
    +--ro interface-mtu?          uint16
```

3.2. Performance Metric

[RFC7471], [RFC7810] and [RFC7823] specify TE performance metric parameters and their usage. The packet switching augmentations specified in this moducment support such a capability, which can be conditional enabled by a YANG feature "te-performance-metric".

```
augment /nw:networks/nw:network/nw:node/tet:te
  /tet:te-node-attributes/tet:connectivity-matrices:
    +--rw performance-metric
      +--rw measurement
        | .....
      +--rw normality
        | .....
      +--rw throttle
        | .....
      +--rw .....
```

Such an augmentation has been applied to:

- o Connectivity matrices container
- o Connectivity matrix entry
- o Local ink connectivities container
- o Local ink connectivity entry
- o TE link attributes containr in a TE link template
- o TE link attributes containr in a TE link
- o TE link attributes containr in a TE link
- o Information source entry in a TE link

4. Model Structure

4.1. Layer 3 TE Topology Module

The model tree structure of the layer 3 TE topology module is as shown below:

```

module: ietf-l3-te-topology
  augment /nw:networks/nw:network/nw:network-types
    /l3t:l3-unicast-topology:
      +--rw l3-te!
  augment /nw:networks/nw:network/l3t:l3-topology-attributes:
    +--rw l3-te-topology-attributes
      +--rw network-ref? -> /nw:networks/network/network-id
  augment /nw:networks/nw:network/nw:node/l3t:l3-node-attributes:
    +--rw l3-te-node-attributes
      +--rw node-ref? leafref
      +--rw network-ref? -> /nw:networks/network/network-id
  augment /nw:networks/nw:network/nw:node/nt:termination-point
    /l3t:l3-termination-point-attributes:
      +--rw l3-te-tp-attributes
        +--rw tp-ref? leafref
        +--rw node-ref? leafref
        +--rw network-ref? -> /nw:networks/network/network-id
  augment /nw:networks/nw:network/nt:link/l3t:l3-link-attributes:
    +--rw l3-te-link-attributes
      +--rw link-ref? leafref
      +--rw network-ref? -> /nw:networks/network/network-id

```

4.2. Packet Switching TE Topology Module

This is an augmentation to base TE topology model.

```

module: ietf-te-topology-packet
  augment /nw:networks/nw:network/nw:node/tet:te
    /tet:te-node-attributes/tet:connectivity-matrices:

6. IANA Considerations

RFC Ed.: In this section, replace all occurrences of 'XXXX' with the actual RFC number (and remove this note).

This document registers the following namespace URIs in the IETF XML registry [RFC3688]:

```

-----
URI: urn:ietf:params:xml:ns:yang:ietf-l3-te-topology
Registrant Contact: The IESG.
XML: N/A, the requested URI is an XML namespace.
-----

```

URI: urn:ietf:params:xml:ns:yang:ietf-l3-te-topology-state
Registrant Contact: The IESG.
XML: N/A, the requested URI is an XML namespace.

URI: urn:ietf:params:xml:ns:yang:ietf-te-topology-packet
Registrant Contact: The IESG.
XML: N/A, the requested URI is an XML namespace.

URI: urn:ietf:params:xml:ns:yang:ietf-te-topology-packet-state
Registrant Contact: The IESG.
XML: N/A, the requested URI is an XML namespace.

This document registers the following YANG modules in the YANG Module Names registry [RFC6020]:

name: ietf-l3-te-topology
namespace: urn:ietf:params:xml:ns:yang:ietf-l3-te-topology
prefix: l3te
reference: RFC XXXX

name: ietf-l3-te-topology-state
namespace: urn:ietf:params:xml:ns:yang:ietf-l3-te-topology-state
prefix: l3te-s
reference: RFC XXXX

name: ietf-te-topology-packet
namespace: urn:ietf:params:xml:ns:yang:ietf-te-topology-packet
prefix: tet-pkt
reference: RFC XXXX

name: ietf-te-topology-packet-state
namespace: urn:ietf:params:xml:ns:yang:ietf-te-topology-packet-state
prefix: tet-pkt-s
reference: RFC XXXX

7. Security Considerations

The YANG module specified in this document defines a schema for data that is designed to be accessed via network management protocols such as NETCONF [RFC6241] or RESTCONF [RFC8040]. The lowest NETCONF layer is the secure transport layer, and the mandatory-to-implement secure transport is Secure Shell (SSH) [RFC6242]. The lowest RESTCONF layer is HTTPS, and the mandatory-to-implement secure transport is TLS [RFC5246].

The NETCONF access control model [RFC6536] provides the means to restrict access for particular NETCONF or RESTCONF users to a preconfigured subset of all available NETCONF or RESTCONF protocol operations and content.

There are a number of data nodes defined in this YANG module that are writable/creatable/deletable (i.e., config true, which is the default). These data nodes may be considered sensitive or vulnerable in some network environments. Write operations (e.g., edit-config) to these data nodes without proper protection can have a negative effect on network operations. These are the subtrees and data nodes and their sensitivity/vulnerability:

`/nw:networks/nw:network/nw:network-types/l3t:l3-unicast-topology/l3-te`

This subtree specifies the layer 3 TE topology type. Modifying the configurations can make layer 3 TE topology type invalid and cause interruption to all layer 3 TE networks.

`/nw:networks/nw:network/l3t:l3-topology-attributes/l3-te-topology-attributes`

This subtree specifies the topology-wide configurations, including the reference to a TE topology from a layer 3 network topology. Modifying the configurations here can cause traffic disabled or rerouted in this topology and the connected topologies.

`/nw:networks/nw:network/nw:node/l3t:l3-node-attributes/l3-te-node-attributes`

This subtree specifies the configurations of layer 3 TE nodes. Modifying the configurations in this subtree can change the relationship between a TE node and a layer 3 node, causing traffic disabled or rerouted in the specified nodes and the related layer 3 topologies.

`/nw:networks/nw:network/nw:node/nt:termination-point//l3t:l3-termination-point-attributes/l3-te-tp-attributes`

This subtree specifies the configurations of layer 3 TE link termination points. Modifying the configurations in this subtree

can change the relationship between a TE link termination point and a layer 3 link termination point, causing traffic disabled or rerouted on the related layer 3 links and the related layer 3 topologies.

/nw:networks/nw:network/nt:link/l3t:l3-link-attributes/l3-te-link-attributes

This subtree specifies the configurations of layer 3 TE links. Modifying the configurations in this subtree can change the relationship between a TE link and a layer 3 link, causing traffic disabled or rerouted on the specified layer 3 link and the related layer 3 topologies.

performance-metric containers

The container "performance-metric" is augmented to multiple locations of the base TE topology model, as specified in Section 3.2. Modifying the configuration in such a container can change the behaviours of performance metric monitoring, causing traffic disabled or rerouted on the related layer 3 links, nodes, or topologies.

Some of the readable data nodes in this YANG module may be considered sensitive or vulnerable in some network environments. It is thus important to control read access (e.g., via get, get-config, or notification) to these data nodes. These are the subtrees and data nodes and their sensitivity/vulnerability:

/nw:networks/nw:network/nw:network-types/l3t:l3-unicast-topology/l3-te

Unauthorized access to this subtree can disclose the layer 3 TE topology type.

/nw:networks/nw:network/l3t:l3-topology-attributes/l3-te-topology-attributes

Unauthorized access to this subtree can disclose the topology-wide configurations, including the reference to a TE topology from a layer 3 network topology.

/nw:networks/nw:network/nw:node/l3t:l3-node-attributes/l3-te-node-attributes

Unauthorized access to this subtree can disclose the operational state information of layer 3 TE nodes.

/nw:networks/nw:network/nw:node/nt:termination-point//l3t:l3-termination-point-attributes/l3-te-tp-attributes

Unauthorized access to this subtree can disclose the operational state information of layer 3 TE link termination points.

/nw:networks/nw:network/nt:link/l3t:l3-link-attributes/l3-te-link-attributes

Unauthorized access to this subtree can disclose the operational state information of layer 3 TE links.

performance-metric containers

The container "performance-metric" is augmented to multiple locations of the base TE topology model, as specified in Section 3.2. Unauthorized access to this subtree can disclose the operational state information of performance metric monitoring.

Appendix A. Companion YANG Model for Non-NMDA Compliant Implementations

The YANG modules `ietf-l3-te-topology` and `ietf-te-topology-packet` defined in this document are designed to be used in conjunction with implementations that support the Network Management Datastore Architecture (NMDA) defined in [RFC8342]. In order to allow implementations to use the model even in cases when NMDA is not supported, the following companion modules, `ietf-l3-te-topology-state` and `ietf-te-topology-packet-state`, are defined as state models, which mirror the modules `ietf-l3-te-topology` and `ietf-te-topology-packet` defined earlier in this document. However, all data nodes in the companion module are non-configurable, to represent the applied configuration or the derived operational states.

The companion modules, `ietf-l3-te-topology-state` and `ietf-te-topology-packet-state`, are redundant and SHOULD NOT be supported by implementations that support NMDA.

As the structure of the companion modules mirrors that of the cooresponding NMDA models, the YANG trees of the companion modules are not depicted separately.

A.1. Layer 3 TE Topology State Module

This module references [RFC8345], and [RFC8346].
