

RA Option for IP Prefix Specification Option

Wu-chi Feng (Portland State), Danny Moses (Intel)

- DMM WG and 3GPP need a way to specify session continuity type in RAs
 - DMM has 4 session types – fixed, session-lasting, non-persistent, graceful-replacement
 - 3GPP has 3 SSC modes – current LS with IETF to specify SSC mode in RA
- Proposing IP Prefix Specification Option in a new RA Option #
 - Cleanest and most general of the approaches explored
 - Can be used for other use cases
 - Most closely aligned with what 3GPP wants to do
 - Want to avoid 3GPP doing something non-standard
- Request: If you have interest, please add comments on the mail list
