

# Authentication and Authorization for Constrained Environments (ACE)

draft-ietf-ace-oauth-authz-13 (= framework)

Ludwig Seitz (ludwig.seitz@ri.se)

IETF 102 ACE WG meeting  
July 16, 2018

# Framework updates from 10 to 11

- Fixed CBOR datatype errors
- Updated boilerplate text

# Framework updates from 11 to 12

- Request error handling got its own section
- Profile identifiers abbreviations now required
- Allow “rs\_cnf” in introspection response
- Allow “rs\_cnf” claim in access tokens
- Align label ranges with COSE/CWT
- Clarified that profiles must specify if/how error responses are protected
- Clarified that profiles can specify other payload formats than CBOR

# Framework updates from 12 to 13

- Changed "Resource Information" to "Access Information" to avoid confusion
- Clarified section about AS discovery
- Removed text about discussion on time in constrained devices
- Editorial changes

# Discussion Points

- Key Identifier collisions
  - When used in cnf claim
- Alignment with OAuth
  - “alg” vs “profile” parameters
- Use of low-digit abbreviations
  - What parameters are valuable enough?
- RD attributes for AS discovery
  - Do we want this in the draft?

# Next Steps

- WGLC?
