draft-ietf-bfd-yang-16

Changes since draft-ietf-bfd-yang-11

- * Addressed comments YANG Doctor and IANA:
 - * Updated references for drafts which became RFCs recently (e.g. RFC8349)
 - * Added/fixed references in import statements
 - * Added list of modules for YANG module registry
 - * Added ietf-bfd-types in XML registry

Status

- * Telechat of July 5th
- * 3 DISCUSS positions (2 remain to be cleared):
 - * Concern with iana-xxx module name since IANA may not always be the registry operator. This is not a BFD-specific issue.
 - * Security considerations. Request to add some text since BFD sessions can be created not just via BFD configuration but via configuration in BFD clients (IGPs etc).
 - * Descriptions for num-of-sessions-up, -down and -admin-down. DISCUSS has been cleared.
- * COMMENTS:
 - * Mention data nodes such as discriminators and addresses in Security Considerations
