Ana Minaburo <ana@ackl.io>
Dominique Barthel <dominique.barthel@orange.com>

Presentation agenda

- What has happened since IETF101? [3 mn]
- What is coming up next? [1 mn]
- Ticket status [1 mn]
- Single padding [10 mn]
- Appendix D, Ticket #15 [5 mn]
- Comments received since WGLC2 [25 mn]

What has happened since IETF101?

What has happened since IETF101?

- Formally closed tickets solved in -10
- Published -11 on Apr 13th
 - Improved Fig 3, Appendix D, when no Dtag, no R
- Published -12 on May 15th
 - SCHC F/R, LSB(y) -> LSB
- Published -13 on May 22nd
 - variable length field text (Ticket #18)

What has happened since IETF101?

- -14, -15 and -16 published on June 29th
 - L2 Word, single padding, RuleID identical in frag and ACK, UDP checksum elision text, fixed Ack-Always sender FSM, C-bit bump
- Second WGLC initiated on June 29th, closing now
- Pascal's shepherd review comments July 3rd
 - Presented at interim July 7th
- More comments received recently
 - Lars, Edgar, Soichi (hackathon), Charlie, Juan-Carlos

What is coming up next?

What is coming up next?

- WGLC2 closure today
- Process comments received
 - Pascal, Lars, Edgar, Soichi, Charlie, Juan-Carlos
 - See dedicated section in this presentation
- Publish -I7 soon
- Sepherd to request publication to IESG

Ticket status

Tickets

- All Tickets by the LPWAN WG
 - <https://trac.ietf.org/trac/lpwan/report/6>
- Selective link to Tickets pertaining to *this* draft
 - [ipv6-schc-all-tickets](#)
- As of today, 29 tickets pertain to this draft
 - that is, #2-#26 and #28-#31
 - all CLOSED, ticket #6 might be re-opened (see last comments received)
- Resolution for each Ticket
 - tracked in Appendix to this presentation, see at bottom
 - recap mail to be sent out soon
- New tickets opened as a response to recent comments?

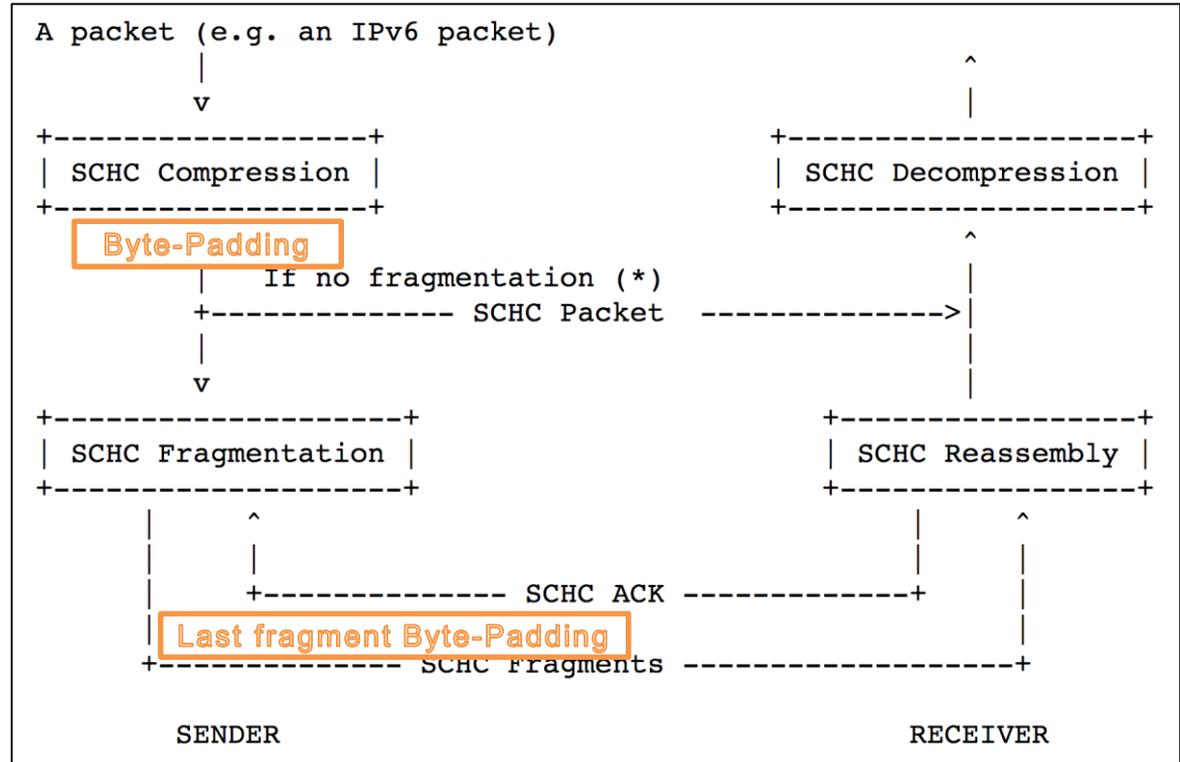

Single padding

Single padding, timeline

- Idea floated at interim May 16th
- Virtual corridor meeting May 22nd
- Full-fledged proposal presented at interim May 30th
- Mail sent out to WG ML on May 30th , again June 5th
- Received 6 positive response, 0 objection
- Decision to integrate proposal at Jun 13th interim
- First appearance in -14, June 29th

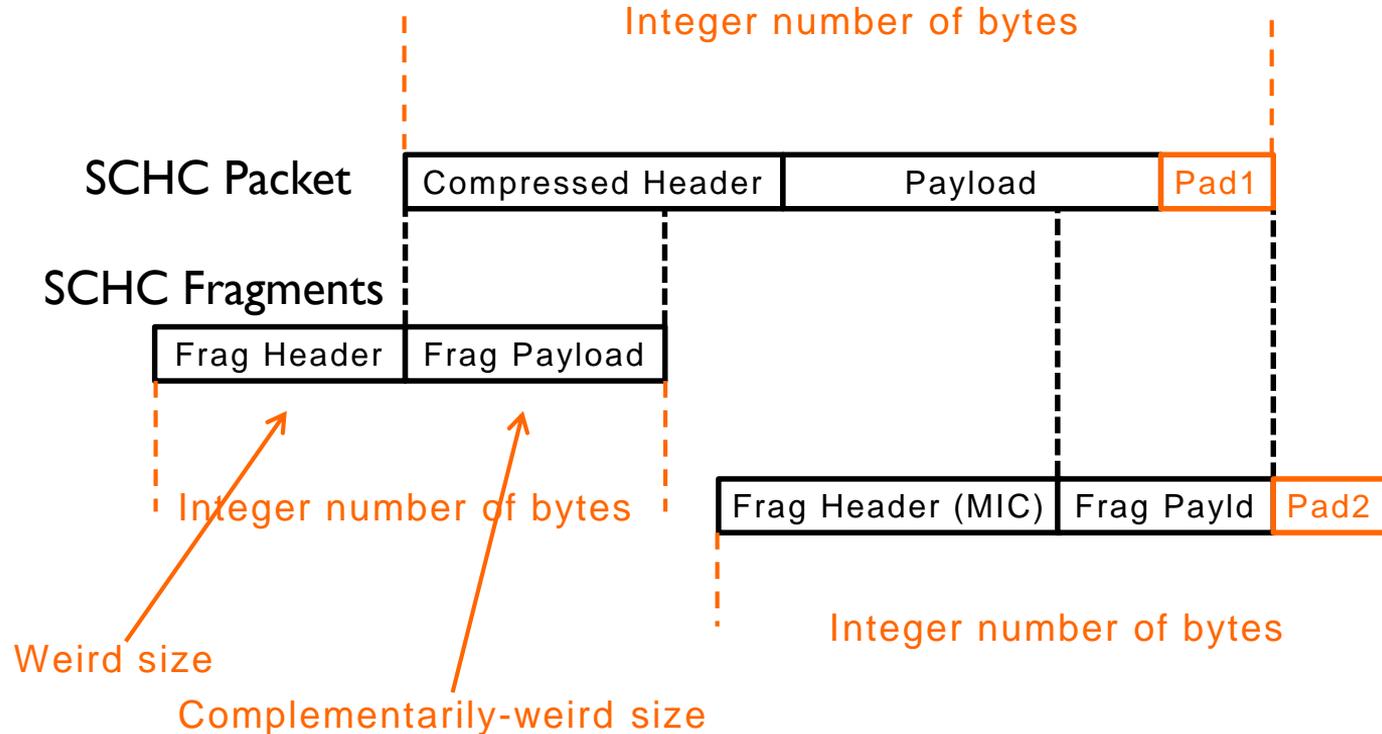

Padding, until -13

- If padding enabled, two paddings in series

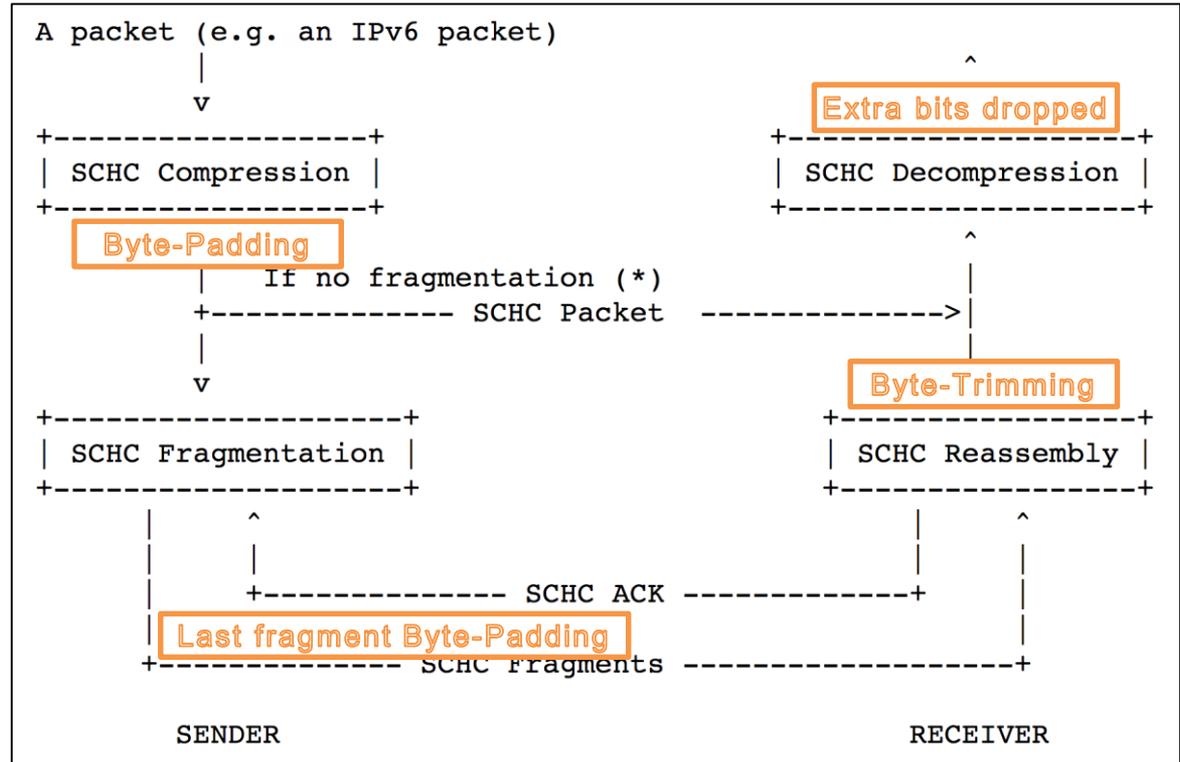

Padding, until -13

- If padding enabled, two paddings in series

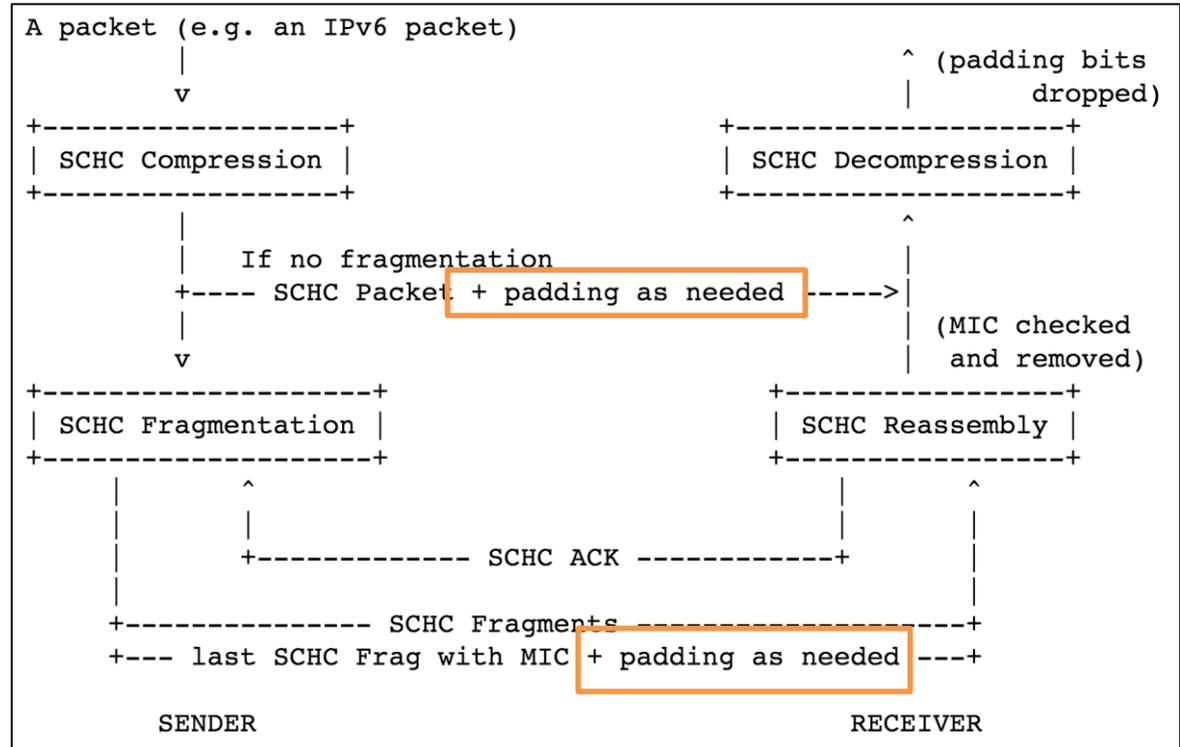

Padding, until -13

- If padding enabled, two paddings in series

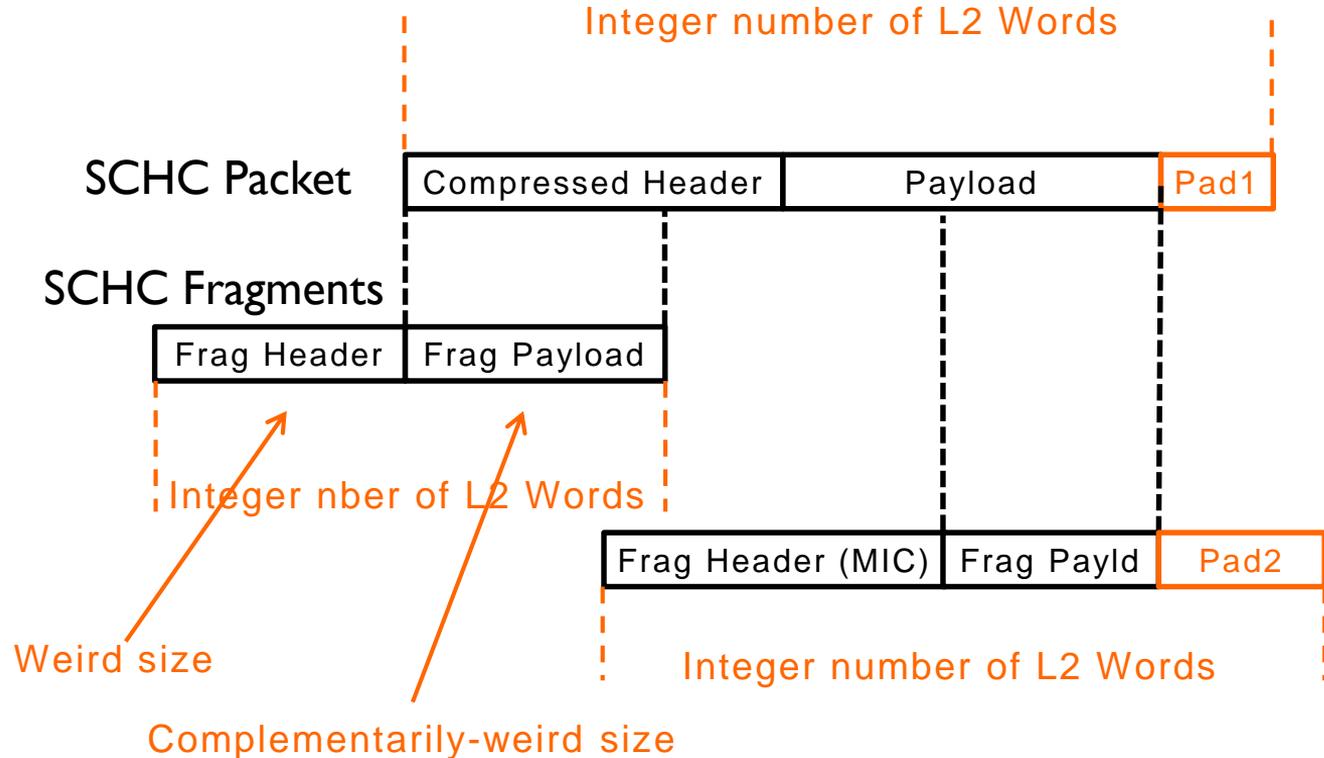

Padding, from -14 onward

- Padding done at most once
- L2 Word can be 1 byte, 1 bit, ...

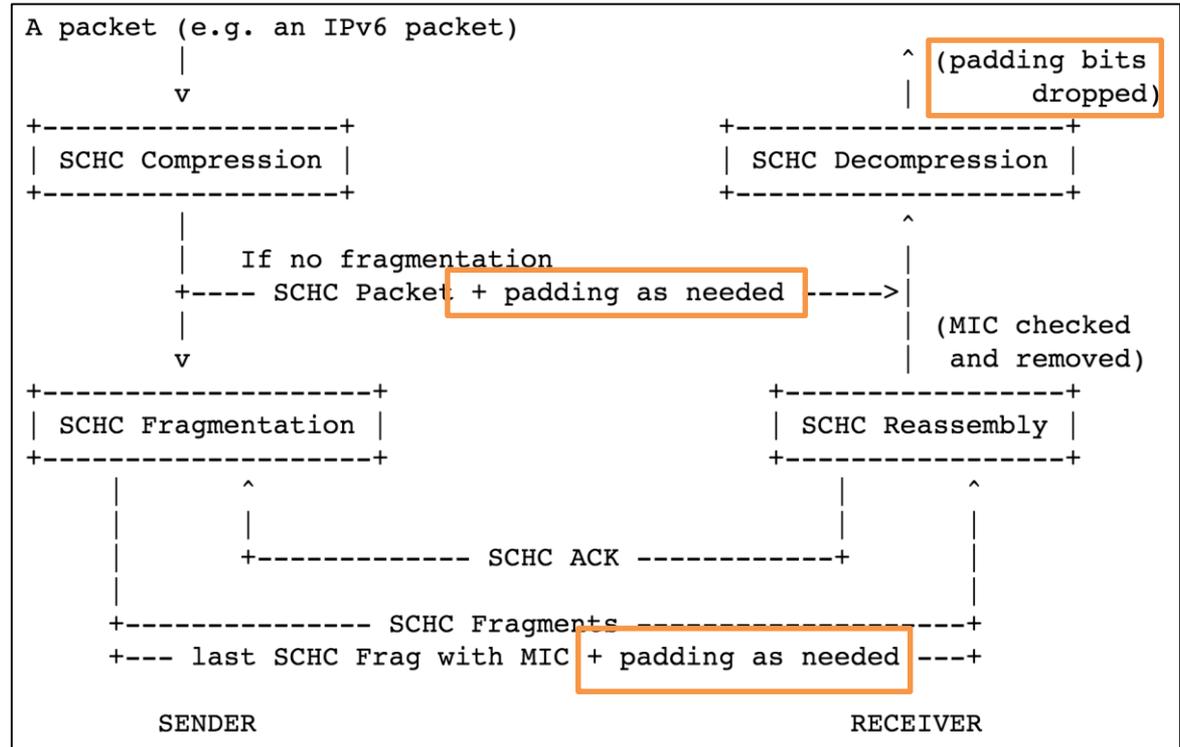

Padding, from -14 onward

- Padding done at most once
- L2 Word can be 1 byte, 1 bit, ...

Padding, from -14 onward

- Padding done at most once
- L2 Word can be 1 byte, 1 bit, ...

Appendix D: parameter/choices left to each technology-specific document

Appendix D

- Text is still rough
- Is an Appendix the right place for this info?
 - Is this normative content?

Appendix D, current listing

- Use-case, deployment
- Mapping of architectural elements
- L2 integrity checking
- RuleID numbering, format
- L2 Word
- Fragmentation by SCHC?
 - Reliability modes, concurrent transmission, parameters, timers

Comments received since WGLC2

Lars

- traffic class field contains ECN bits. The “ignore” MO will bleach them out
 - Good point, will be taken into account
 - Is a device sensitive to ECN? So far, no Layer 4 in LPWAN space uses ECN, so can safely ignore it.
 - In the future, could transmit it in full or could use send-LSB CDA

Edgar

- Write “L2 MTU” instead of “L2 data unit”
 - We will update text

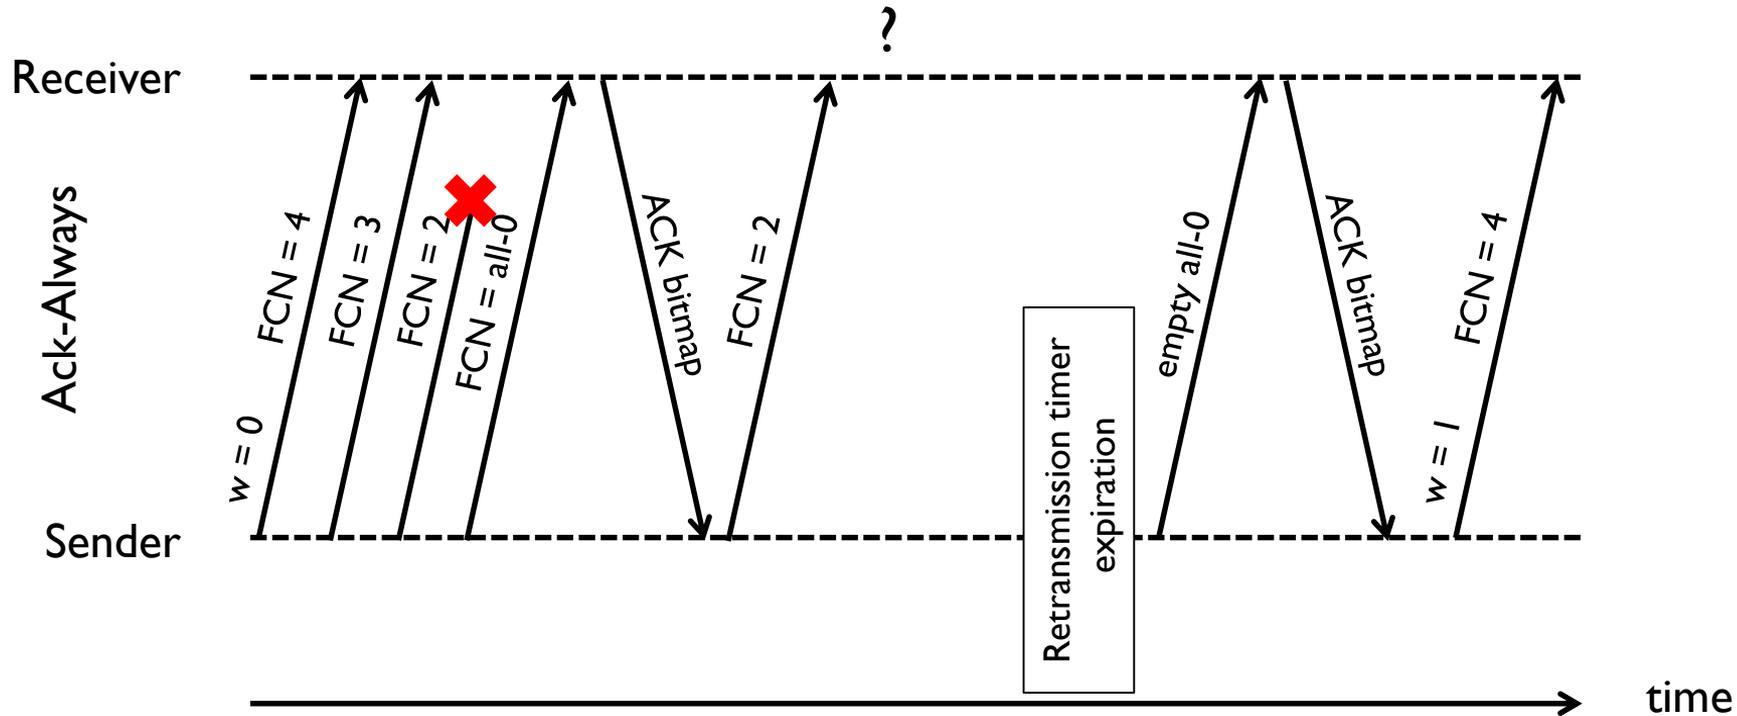

Soichi

- Hackathon : working on implementation, with standard CRC library. They are byte-oriented.
 - In theory, CRC can be computed on any bit array
 - Specify byte fill-up for MIC computation ?
 - Leave to technology-specific draft to specify MIC computation ?

Pascal

- partially filled all-0 windows is complex, creates un-necessary complication and confusion in description

What if windows can be partially filled?

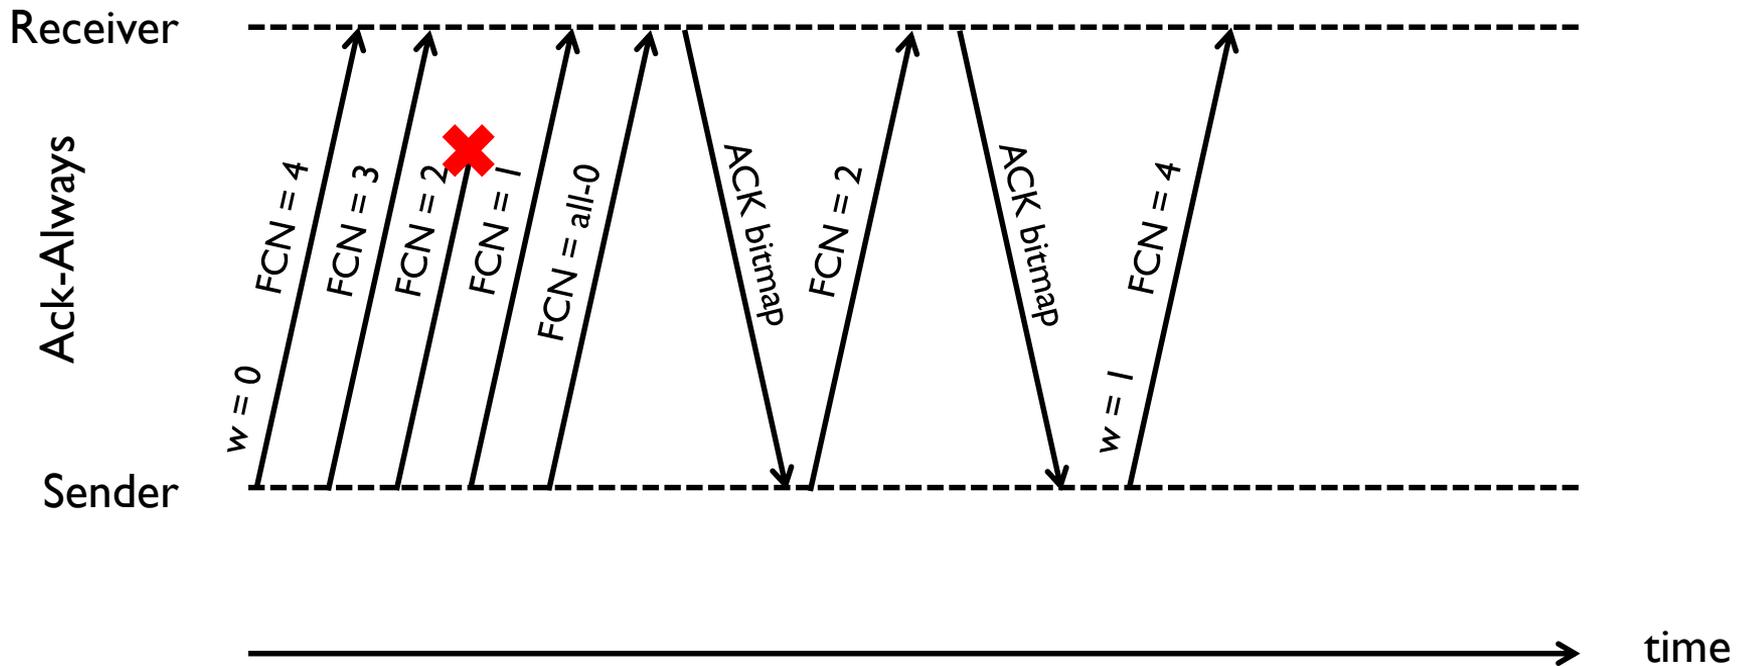

Partially filled windows?

- 3 options
 - Leave situation unchanged, retransmission timer will trigger sending the « empty All-0 » frag
 - Mandate that windows **MUST** be full (but the last)
 - Mandate that (empty) All-0 frag be sent at the end of each retransmission burst

Partially filled windows?

- Proposing to adopt option 2
 - mandate all-0 windows are full, all FCN values used.

If windows must be partially full

Partially filled windows?

- Proposing to adopt option 2
 - mandate all-0 windows are full, all FCN values used.
- Opinions?
 - Got 5 supports on ML, no objection

Pascal

- #2: “expected window” is both $w=0$ and $w=1$ after receiver sends SCHC ACK
 - Issue disappears if we mandate that windows be full

Pascal

- #3: text on fragmentation still hard to parse.
Many “if”, “otherwise”, “on the other hand”

Pascal

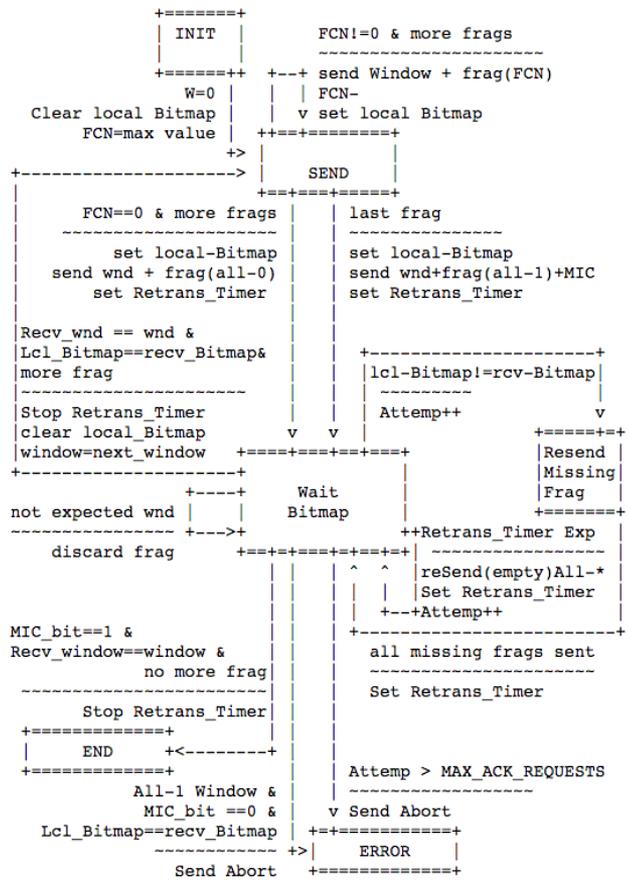

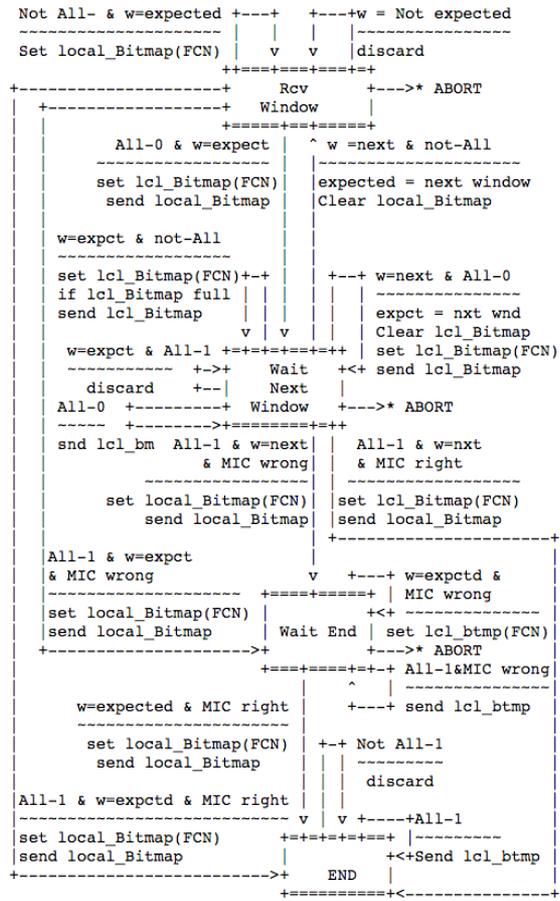

Figure 41: Sender State Machine for the ACK-Always Mode

Pascal

- #3: text on fragmentation still hard to parse.
Many “if”, “otherwise”, “on the other hand”
 - Make the FSM drawing normative, text an help to decipher the drawing?

Charlie

- #1: Since the Sender-Abort doesn't have a MIC, does this mean that the Abort could be spoofed and all fragmented transmissions disabled?
 - L2 has its own anti-spoofing mechanism. The All-I frag MIC is not meant to protect the message, but to verify the whole reassembly process.

Charlie

- #2: If L2 Word can be one bit, what about this sentence “The size of the All-0 fragment header is generally not a multiple of the L2 Word size.”
 - If L2 Word is one bit, the All-0 fragment header is indeed a multiple of the L2 Word. “generally” catches that exception as well. Better wording?

Charlie

- #3: MIC is only used with fragmentation, yet required for UDP elision at compression. What if UDP datagram is compressed but not fragmented?
 - If not fragmented, could send UDP checksum in full. Or rely on L2 CRC if strong enough. Or send one fragment in order to have MIC.

Charlie

- #4: fragmentation/reassembly mechanism in the specification is to be treated as optional.
 - We'll look at it and try to restructure text. Will rewrite Appendix D in a hierarchical manner, esp. wrt. Fragmentation

Charlie

- #5: Target Value type to be stored in context to check for run-time discrepancies?

Charlie

- #6: implication of allowing out-of-order application of CDAs, such as compute-*?

Juan Carlos

- #1: Make MIC optional? If L2 integrity is good enough, why waste bytes for a MIC? Especially for non-UDP traffic?
 - MIC is still needed to make sure that all the fragments of last window have been received. MIC can be made as short as an L2 Word.
 - Could make all ACK retransmission requests be All-0, even in last window: rename it “SCHC ACK Request”

Juan Carlos

- #2: Ack-on-Error. Currently, on loss of All-0 Frag or loss of ACK : unexpected window, therefore Abort.
Proposal to treat Frag with unexpected w value as a roll-back signal.

Juan Carlos

- #3: allow $N > 1$ in No-Ack mode
 - For Alignment ? Looks like Reserved bits
 - To convey some information to the receiver:
however, since FCN starts from
`MAX_WIND_FCN`, no information is conveyed

Thank you for your attention

Details on Ticket resolution

Ticket resolution (1/5)

ticket #	nickname	resolution first appeared in	section(s), in that version
2	Rule ID default size	-10	5, 6.2, 7.2
3	Zip bomb	-10	10.1
4	DNS lookup	-10	6.1
5	Decouple Compr. and Fragm.	-10 -12	3, 4 3, 7.1, 7.2
6	Fully-used fragmentation windows	-10 Re-open for -17?	7.2, 7.5.2
7	Hop Limit default values	N/A	N/A

Ticket resolution (2/5)

ticket #	nickname	resolution first appeared in	section(s), in that version
8	Different RuleIDs with same Dtag?	N/A	N/A
9	Reordering between RGW and NGW	-10	Intro, 7.1
10	Interleaving of packets	N/A	N/A
11	ACK format, padding	-10	7.4.3, 8
12	Padding place	-10 -14	8 3, 8
13	Terminology, sublayers	-11 -13	4 4

Ticket resolution (3/5)

ticket #	nickname	resolution first appeared in	section(s), in that version
14	Beg./ending rule, legacy devices	-10	5
15	Parameters to be specified in technology-specific documents	-11	Appendix D
16	Compression terminology	See #13	See #13
17	New compression terms	-10	3, 5, 6.1
18	MSB/LSB arguments	-12	6.5
19	Fragmentation terminology	-14	3, 7.2

Ticket resolution (4/5)

ticket #	nickname	resolution first appeared in	section(s), in that version
20	« byte boundary » term	-14	7.4, 8
21	C-bit, All-I SCHC ACK « bump »	-14	7.5, App. D
22	Make fragmentation optional	-11	Abstract, I
23	NB-IoT, multiRAT, fragmentation	-14	7.1
24	What if Dtag not present?	-13	7.2
25	Rule synch. between both ends	N/A	N/A
26	Frag and ACK RuleID match?	-14	7.4.3

Ticket resolution (5/5)

ticket #	nickname	resolution first appeared in	section(s), in that version
27	N/A to this draft		
28	Ill-formed sentence in 7.5.2	-14	7.5.2
29	Rephrase Bitmap encoding section	-14	7.4.3.1
30	Fix Ack-Always FSM drawing (1)	-14	App. C
31	Fix Ack-Always FSM drawing (2)	-14	App. C
