

# Query Minimisation

## draft-ietf-dnsop-rfc7816bis

---

Paul Hoffman  
IETF 103, Bangkok

# Status

---

- -01 published in September, not many changes from RFC 7816
- Basic design remains. After checking cache, resolvers SHOULD send query with
  - QTYPE of NS
  - QNAME that is the original QNAME, stripped to just one label more than the zone for which the server is authoritative

# Intended changes for the RFC

---

- Standards track instead of Experimental
- Talk about specific resolver implementations
- Much more discussion of fallback strategies
- Reorganize and edit to make it feel less “experimental”

# What's next

---

- Reviews and comments welcome
- We'll plan for a new draft before end of year
