Security Policy Object for I2NSF

Liang Xia
Qiushi Lin
IETF 103
Recap & Updates

- This document provides a minimal set of commonly used policy objects:
  - Object based configuration has been widely used in NSFs for re-usability and simplicity
  - Policy objects can be used in I2NSF consumer-facing interfaces and NSF-facing interfaces
  - As NSF-facing interface DM draft builds the architecture of I2NSF policy rule, this draft is supplementary to the former one and provides detailed definitions of policy objects.

- Updates to -01 version: Editorial updates
Questions/Comments

• The WG’s opinion?
  • Do you suggest to use the defined policy objects in other data model drafts?
  • Call for adoption: Is this draft a good start for a WG document?

• Please review and comment
