captive portals

IETF 104, Prague
Wednesday 11:20-13:20, Karlin 3
Note Well

This is a reminder of IETF policies in effect on various topics such as patents or code of conduct. It is only meant to point you in the right direction. Exceptions may apply. The IETF’s patent policy and the definition of an IETF "contribution" and "participation" are set forth in BCP 79; please read it carefully.

As a reminder:

- By participating in the IETF, you agree to follow IETF processes and policies.
- If you are aware that any IETF contribution is covered by patents or patent applications that are owned or controlled by you or your sponsor, you must disclose that fact, or not participate in the discussion.
- As a participant in or attendee to any IETF activity you acknowledge that written, audio, video, and photographic records of meetings may be made public.
- Personal information that you provide to IETF will be handled in accordance with the IETF Privacy Statement.

As a participant or attendee, you agree to work respectfully with other participants; please contact the ombudsteam if you have questions or concerns about this.

Definitive information is in the documents listed below and other IETF BCPs.

- Internet Standards Process,
- Working Group processes,
- Anti-Harassment Procedures,
- Code of Conduct,
- Copyright,
- Patents, Participation,
- Privacy Policy

For advice, please talk to WG chairs or ADs.

7710bis (-02) changes from 7710

Clarify that IP string literals are NOT RECOMMENDED.
Clarify that the option URI SHOULD be that of the captive portal API endpoint.
Clarify that captive portals MAY do content negotiation.
Added text about Captive Portal API URI precedence in the event of a network configuration error.
Added urn:ietf:params:capport-unrestricted for networks without a portal.
Added urn:ietf:params:capport-api link relation type.
7710bis Questions

Does the content negotiation text look reasonable?

What more should be said about precedence in the event of misconfiguration?

Other?

Adopt?
ietf-capport-architecture

Kyle Larose seeking help to move the draft forward

Suresh Krishnan is willing to help out
API update

<insert presentation>
AWTY?
Sticking point

Capport is a manifestation of a “tussle”

Networks would like to do a lot more than provide a simple yes/no signal

Feedback from David Bird, Nicholas Maillot to this effect

Networks are clearly more complex than this

Are we comfortable with that?

On what basis can we claim that?
<back matter>
Architecture diagram
Example (overly complicated) Hotspot

Venue / Hotspot Network Owner

Venue Web Site(s)
Hotel PMS

Hotspot

Access Point / NAS
Local Configurations:
- Walled garden settings
- Default session parameters
- One (or more) RADIUS AAA
- Local user accounts

Hotspot Service Provider

Captive Portal
RADIUS / AAA

Services
- Payment processing
- Roaming / marketing
- Vouchers, access products
- Configuration management

Roaming / Marketing Partners

Partner Website
RADIUS / AAA
Partner Website
Consider location of:
1. the enforcement point?
2. the API endpoint?
3. initial web endpoint?

Architecture scope decisions affect recommendations about:
1. UE identifying tokens
2. DHCPv4/PvD deployment guidelines
