Summary of process

- Discussed last few IETFs (IETF102, IETF103)
- Outcome (IETF103):
  - First step: create questionnaire about use of IGMP/MLD and its features in customer network (operators) and vendors implementations.
- Since IETF103:
  - Team formed, mailing list (igmp-mld-bis@ietf.org), created questionnaire:
    - draft-ietf-pim-igmp-mld-bis-00
- Plan now (to be discussed here).
  - Have WG approve questionnaire as good enough to send out (not publish as RFC)
  - Have all WG members with ideas post to appropriate communities (e.g.: Internet 2)
    - Feedback to be collected by trusted party (proposal: Tim Chown)
  - Feedback summarized, put into draft
  - ... story continues from there
Thank You!
