March 2019

Comments from IESG reviews

- Clarification on (no) MTI for SASL
  - Now states MTI for either SASL-EXTERNAL or SASL-SCRAM
- Security considerations
  - Resolving/clarifying use of XEP-0060 (pub/sub)
  - Potential for broker to be MiTM, needing end-to-end protection
- Optional use of XEP-0059 to cap results from discovery search
- Discussion on Standards vs Informational draft

Version -10

- Addresses all comments
- Rationale for leaving it as standards:
  - It is an applicability statement (per RFC 2026) for how to use XMPP for exchanging security information
