# Why am I here?

So I got this MIB

It's a MIB.

It's not YANG.

It's (going to be) Informational.

It does not use SMI OIDs.

It's for cryptographic modules:  
asymmetric, symmetric, trust anchors,  
firmware, and security policies.

---

# Why am I here?

So I got this MIB

It's not YANG.

It's got some non-Internet-y concepts:

zeroize,

security policies/classifications,

compromised key list (!=CRL),

priming every cert path param,

PAL (from RFC 8295),

Firmware (from RFC 4108)

TAMP,

...

---

# What am I hoping for?

A pony or ...

ISE (Internet Stream Editor) stream!

---
