Summary of process

- Discussed during last few IETFs (IETF102, IETF103)
- Outcome (IETF103):
 - First step: create questionnaire about use of IGMP/MLD and its features in customer network (operators) and vendors implementations.
- Since IETF103:
 - Team formed, mailing list (igmp-mld-bis@ietf.org), created questionnaire:
 - draft-ietf-pim-igmp-mld-bis-00
- Plan now (to be discussed here).
 - Have WG approve questionnaire as good enough to send out (not publish as RFC)
 - Have all WG chairs/members? post to appropriate communities (e.g.: Internet 2)
 - Feedback to be collected by trusted party (proposal: Tim Chown)
 - Feedback summarized, put into draft
 - ... story continues from there (take feedback into account updating status of docs)
