Endpoint Posture Collection Profile

March 27, 2019
Agenda

• Review Changes in -04 [1]
  • Clarified Scope
  • Improved Readability
  • Other Changes

• Next Steps

Clarified Scope

• EPCP relies on components for which we do not yet have a standardized solution making the draft seem incomplete

• Reduced draft scope to focus exclusively on the collection of endpoint information and the communication of that information to a centralized server

• Work beyond this scope is now clearly identified as future work
Improved Readability (1)

• Received feedback [1] that the document is hard to follow going from very abstract to very detailed information

• For BCP, readers primarily care about the technical details for how to use the referenced standards

• Made changes to better align the draft with the needs of a BCP

1. https://mailarchive.ietf.org/arch/msg/sacm/us9sOAQ3F0mbc74r6OYlg408zBM
Improved Readability (2)

• Changes included:
  • Consolidated introduction and moved EPCP rationale text to the appendix
  • Added text explaining the structure of the draft to the introduction
  • Moved examples of EPCP using NEA to the appendix
  • Moved supported and non-supported use cases to the appendix
Other Changes

• Improved consistency by making sure all relevant standards bodies were mentioned

• Addressed a comment noting that privacy information may not be owned by the enterprise

• Removed duplicative text around what was considered future work

• Consolidated EPCP component diagrams since they were very similar

• Elevated Administrative Interface and API to an architectural component
Next Steps

• Adam and Bill are going to help with architectural alignment

• Integrate feedback from Chris

• Publish -05
