IOAM / POT

SFC WG

March 28th, 2019

draft-ietf-sfc-ioam-nsh-01

- Editorial updates only
  (author affiliation changes, header example shown fully aligned with RFC 8300, updated references)

- Draft is stable for a while. Ready for WGLC?

draft-ietf-sfc-proof-of-transit-02

- Consolidation of mechanisms for ordered proof of transit (OPOT) Discussed at IETF 103 and thereafter on the mailing list:
  - Document uses only SSSS-based approach for OPOT (nested crypto approach dropped).

- Editorial updates (per the discussion on the mailing list)
  - Clarifications on units and value ranges used for parameters (-> references included to YANG model), fixes of several typos, better alignment of the description of the generic algorithm and the toy-example, additional references to ietf-draft-ietf-ippm-ioam-data for general IOAM security considerations

- Do we require any additional key updates, or are we ready for WGLC?

Thank you
