# Problem Statement

- MPLS-TP Topology Discovery and Tunnel Setup
  - OTN and MPLS-TP multi-layer network

# Approach

- MPLS-TP is a profile of MPLS with TE features [RFC5921]
  - Augment TE Topology and Tunnel models
  - Minimum set of attributes not (yet) available in MPLS-TE models (gap analysis)

# MPLS-TP Topology

- No need to augment `te-label`:
  - Single-domain Tunnels with label allocation done by the NEs
- Augment `te-bandwidth`:
  - For `max-link-bandwidth`, `max-resv-link-bandwidth` and `unreserved-bandwidth` of TE Link:

```
+--:(mpls-tp)
  +--rw mpls-tp-bandwidth?  uint64
```

- For `max-lsp-bandwidth` of TE Link and TTP:

```
+--:(mpls-tp)
  +--rw bandwidth-profile-name?  string
  +--rw bandwidth-profile-type?  identityref
  +--rw CIR?                      uint64
  +--rw EIR?                      uint64
  +--rw CBS?                      uint64
  +--rw EBS?                      uint64
```

# MPLS-TP Tunnel

- Augment `te-label`:
  - For `label-hop` of `computed-paths-properties` of primary and secondary paths and LSPs

```
+---:(mpls-tp)
    +---ro mpls-label?   rt-types:mpls-label
```

- Augment `te-bandwidth`:
  - For `bandwidth` of TE Tunnel:

```
+---:(mpls-tp)
    +--rw bandwidth-profile-name?   string
    +--rw bandwidth-profile-type?   identityref
    +--rw CIR?                       uint64
    +--rw EIR?                       uint64
    +--rw CBS?                       uint64
    +--rw EBS?                       uint64
```

# Merging with MPLS-TE Models

- Bidirectional LSPs
  - All MPLS-TP bidirectional LSPs flavours are supported by generic TE tunnel (to be confirmed)
- Equal Cost Multi-Path (ECMP)
  - Path computation for MPLS-TP LSPs should select only links not performing ECMP
- Penultimate Hop Popping (PHP)
  - Path computation for MPLS-TP LSPs should select only links on the last TE node that allows disabling PHP
- Generic Alert Label (GAL)
  - Path computation for MPLS-TP LSPs should select only links which are capable to process the GAL
- Others?

# Open Issues & Next Step

- Agree relationship with MPLS-TE models
  - Merged or Separated models?
- Address Open Issues (section 6)
