Terminology for DNS Transports and Location  
draft-hoffman-dns-terminology-ter-02

Abstract

This document adds terms and abbreviations to "DNS Terminology" (RFC 8499) that relate to DNS running over various transports, as well as terms and abbreviations for DNS resolution at traditional and non-traditional locations.

[[ This is an early attempt at these terms. They will probably be improved over time. ]]

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on January 26, 2020.

Author's Address . . . . .	3

### 1. New Terms and Abbreviations

The following terms and abbreviations are added to Section 6 of [RFC8499].

DNS-over-TLS (DoT): DNS over TLS as defined in [RFC7858] and its successors.

DNS-over-HTTPS (DoH): DNS over HTTPS as defined in [RFC8484] and its successors.

Classic DNS: DNS over UDP or TCP as defined in [RFC1035] and its successors. "Classic DNS" applies to DNS communication between stub resolvers and recursive resolvers, and between recursive resolvers and authoritative servers.

Recursive DoT (RDoT): RDoT specifically means DNS-over-TLS for transport between stub resolvers and recursive resolvers. This term is necessary because it is expected that DNS-over-TLS will later be defined as a transport between recursive resolvers and authoritative servers,

Authoritative DoT (ADoT): If DNS-over-TLS is later defined as the transport between recursive resolvers and authoritative servers, ADoT specifically means DNS-over-TLS for transport between recursive resolvers and authoritative servers.

### 2. Normative References

#### Acknowledgments

Sara Dickinson contributed ideas before the first draft was published. Warren Kumari contributed the idea for "Applications Doing DNS" as a term. Many people contributed the idea that it is better to define terms rather than just acronyms.
