

CalConnect Drafts

Bron Gondwana
<brong@fastmailteam.com>

CalConnect is an Industry Group

- Originally set up to allow companies who were working on new products to test interoperability without causing PR issues.
- Meets twice per year (was 3 times in the past)
- Next meeting October 7-11 in Philadelphia:
 - <https://www.calconnect.org/events/>
- We will host a CALEXT interim video-chat during like we did last time:
 - <https://datatracker.ietf.org/doc/minutes-interim-2019-calext-01-201906041600/>

PUBLIC_DRAFTS

- CalConnect has accumulated many documents which cover either experiments done by vendors or extensions which are in shipping products!
- https://github.com/CalConnect/PUBLIC_DRAFTS
- We're working through and deciding what makes sense to bring to IETF
 - either to work on (if it's experiments)
 - or as an informative track RFC to document what you might see in the wild

We're also working on Contacts

- JSContact over in DISPATCH
- VCARD extensions
- CalConnect is a member of ISO and working on date and naming standards (e.g. ISO8601-2)

Keen to get new authors

- Right now most of the work is being done by Ken Murchison and Mike Douglass, often taking semi-abandoned work-in-progress
- We'd love to have more volunteers to work on documents! You don't need to be a calconnect member, we'll work on the calisify list.
- The bandwidth of calext to handle these documents depends on having reviewers and authors here!
