Running a Root Server Local to a Resolver
draft-ietf-dnsop-7706bis

Paul Hoffman, Warren Kumari

IETF 105, Montréal

Status: getting close to done

- Examples have been updated
- Still a bit to add:
  - "Make the use cases explicit"
  - "Describe how slaving the root zone from root zone servers does not fully remove the reliance on the root servers being available"
- Still need to do: careful checking for "what has been updated"

Next steps

- Another draft before September
- Then ask for WG Last Call
  - But if more needs to be done, we're not in a rush
