

draft-lear-eap-teap-brski- 03

- IETF 105
- Eliot Lear, Owen Friel, Nancy Cam-Winget, Dan Harkins

Review

- RFC 7170 (TEAP) specifies TLS-based authentication as well as enrollment support
- RFC 8366 specifies a voucher for trusted introduction
- draft-ietf-anima-bootstrapping-keyinfra specifies a voucher request
- This draft incorporates all three through a flow

Changes since Prague

- Security considerations filled in
- Diagrams are updated
- Join Registrar and EAP server combined
- Dan added as co-author

Next steps

- Coding happening now (wpa_supplicant, elsewhere)
- We need some discussion about the 2000 SSID (BSS) problem. 802.11 layer?
- Redraw diagrams to avoid humps (just split them up)
- Adoption?
