THE PROBLEM

▸ EAP-Session-ID has not been defined for fast re-authentication for

▸ EAP-SIM, EAP-AKA

▸ And no Session ID derivation was defined for:

▸ EAP-AKA' (RFC 5448), PEAP

▸ Vendor EAP methods are likely to have the same problem, too

▸ Session-Id derivation is needed for ERP (RFC 6696) and FILS (IEEE 802.11ai)

THE DRAFT

▸ -01 has minor changes

▸ Updates to EAP-SIM, noting that there may be a varying number of triplets

▸ Seems ready for publication?
