I. We all know this list:

"MUST", "MUST NOT",

"REQUIRED",

"SHALL", "SHALL NOT",

"SHOULD", "SHOULD NOT",

"RECOMMENDED", "NOT RECOMMENDED",

"MAY", and "OPTIONAL"

2. Should we add "RESERVED"

It is frequently used, and poorly documented with differing ideas of exactly what it means depending on the context it is used and who is interpreting that use.

3. Problem

When RESERVED is treated as MUST be zero.
Blocks future use of the RESERVED code point
due to implementations that drop, ignore or act
to defeat the new use

4. Further discussion please
