Client Hints

HTTP WG - IETF 105
No major draft changes since IETF 104

- A few PRs in-the-air
Issues to discuss

- **`Sec-CH` prefix**
  - Objections to creating a new namespace
- **Move to Structured Headers**
  - Any objections?
- **Active vs. passive fingerprinting**
  - CH would make it harder to track how the data is used?
- **Exposure to CDNs**
  - Are CDNs part of the threat model?
HTTPSSVC - to solve the first view problem?

- PR to add a [Client Hints Alt-Svc extension](#)
Moving forward?
