

Origin Validation On Egress

`draft-ymbk-sidrops-ov-egress-01.txt`

2019.07.23

`randy@psg.com`

Problem:
The origin AS
may be modified
by outbound policy

So, policy semantics based
on RPKI Origin Validation
state **MUST** be able to be
applied separately on
distribution into BGP and
on egress

When applied to egress
policy, the effective
origin AS MUST be
used to determine the
Origin Validation state

Request WG Adoption
