New common document structure. Cleaned up and filled up with new text where necessary.

DetNet Data Plane: IP over 802.1 TSN

[draft-ietf-detnet-ip-over-tsn-01](#)

- Content
 - specifies the Deterministic Networking IP data plane when operating over a TSN sub-network.
- DetNet IP Data Plane
 - DetNet forwarding sub-layer only
 - Service protection within the TSN sub-network
- Management and Control Information Summary

DetNet Data Plane: IP over 802.1 TSN

Management and Control Information Summary

DetNet flow and TSN Stream mapping related information are required:

- **TSN-aware IP DetNet nodes** are member of both the DetNet domain and the TSN sub-network.
- Within the TSN sub-network the TSN-aware IP (DetNet) node has a TSN-aware Talker/Listener role.
- DetNet flow ID and flow related parameters/requirements must be converted to a TSN Stream ID and stream related parameters/requirements.
- Triggering the setup/modification of a TSN Stream in the TSN sub-network is an example where management and/or control plane interactions are required between the DetNet and TSN sub-network.
- **TSN-unaware IP (DetNet) nodes** make such a triggering even more complicated as they are fully unaware of the sub-network and run independently.

DetNet Data Plane: MPLS over 802.1 TSN

[draft-ietf-detnet-mpls-over-tsn-01](#)

- Content

- specifies the Deterministic Networking MPLS data plane when operating over a TSN sub-network.

- DetNet MPLS Data Plane

- DetNet service and forwarding sub-layer
- Service protection interworking scenarios are left for further study.

- Management and Control Information Summary

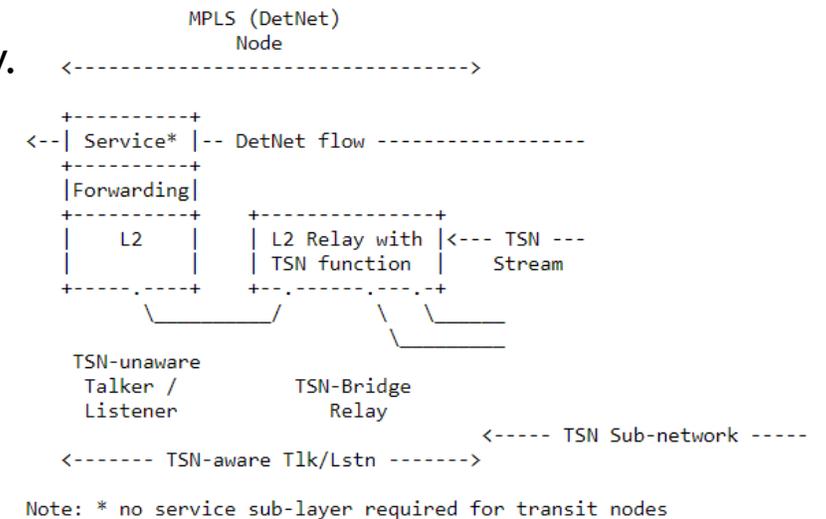

Figure 3: MPLS (DetNet) Node with TSN Functions 6

DetNet Data Plane: MPLS over 802.1 TSN Management and Control Information Summary

DetNet flow and TSN Stream mapping related information are required:

- **TSN-aware MPLS DetNet nodes** are member of both the DetNet domain and the TSN sub-network.
- Within the TSN sub-network the TSN-aware MPLS (DetNet) node has a TSN-aware Talker/Listener role.
- DetNet flow ID and flow related parameters/requirements must be converted to a TSN Stream ID and stream related parameters/requirements.
- Triggering the setup/modification of a TSN Stream in the TSN sub-network is an example where management and/or control plane interactions are required between the DetNet and TSN sub-network.
- **TSN-unaware MPLS (DetNet) nodes** make such a triggering even more complicated as they are fully unaware of the sub-network and run independently.
- **Service protection interworking scenarios are left for further study.**

DetNet Data Plane: 802.1 TSN over MPLS

[draft-ietf-detnet-tsn-vpn-over-mpls-01](#)

- Content
 - specifies the Deterministic Networking data plane when TSN networks are interconnected over a DetNet MPLS Network.
- Concept
 - TSN Stream(s) treated as DetNet App-flow.
 - DetNet domain behaves as a TSN relay node for the TSN streams
 - Service proxy behaves as a port of that TSN relay node.
- TSN over MPLS Data Plane Procedures defined:
 - TSN related
 - DetNet Service Proxy
 - DetNet service and forwarding sub-layer
 - Service protection interworking scenarios are left for further study
- Management and Control Information Summary

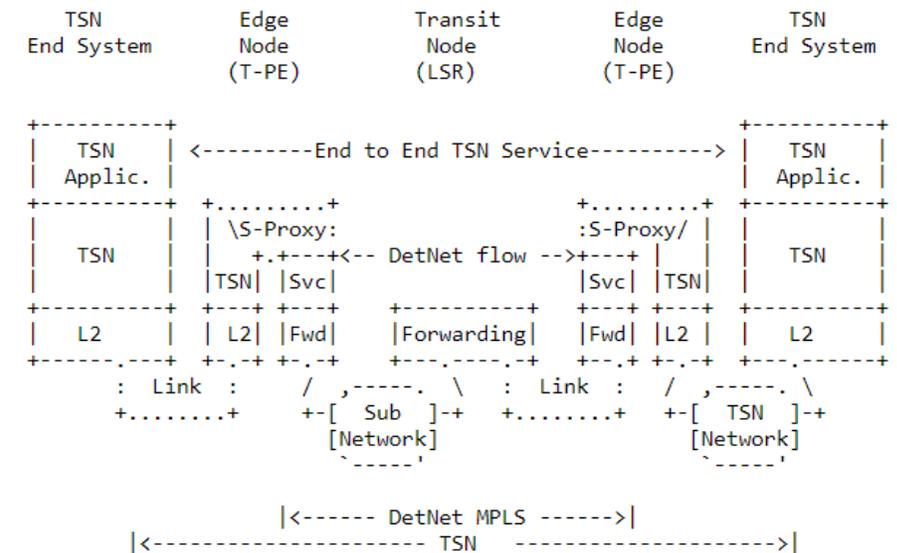

Figure 1: A TSN over DetNet MPLS Enabled Network ⁸

DetNet Data Plane: 802.1 TSN over MPLS

Management and Control Information Summary

DetNet flow and TSN Stream mapping related information are required:

- for the **service proxy function of MPLS (DetNet) Edge nodes**
- MPLS DetNet Edge nodes are member of both the DetNet domain and the connected TSN network.
- From the TSN network perspective the MPLS (DetNet) Edge node has a "TSN relay node" role, so TSN specific management and control plane functionalities must be implemented.
- TSN Stream ID(s) and stream(s) related parameters/requirements must be converted to a DetNet flow-ID and flow related parameters/requirements.
- Triggering the setup/modification of a TSN Stream in the TSN sub-network is an example where management and/or control plane interactions are required between the DetNet and TSN network.
- **Service protection interworking scenarios are left for further study.**

Summary – Next Steps

- Collecting feedback ...
- Add conformance language
