Outsourcing Home Network Authoritative Naming Service

draft-ietf-homenet-front-end-naming-delegation

Migault, Richardson, Hunter, Weber, Griffiths, Cloetens
draft status

Complete re-write of the document

Specification of the protocol between HNA / DM

Specifications are implemented (Ray)

Concrete interests in deploying it

Next Step:

- review the text
- WGLC before next IETF
HNA

- signs the Public Homenet Zone
  - the key is likely generated by the HNA and kept secret
- authentication to the DM is performed using specific keys, certificates

Resolver can resolve example.com

- on the Public Homenet Authoritative Servers on the Global Internet
- on the Homnet Authoritative Servers
  - keep home net connectivity in case of network disruption
  - may be provided by the HNA or other HNR.
channels

control channel: to set the relation between HNA/DM

- Use DNS message to exchange information:
  - HNA retrieves AXFR responses from the DM (NS, AAAA, A, SOA)
  - HNA sends DNS updates to the DM (secondary, DS, STOP)

synchronization channel: (primary / secondary)

distribution channel
securing the channels

control channel is authenticated / encrypted using TLS

securing synchronization channel

- TLS
- Is it acceptable not to have it secured?
  - Public Homenet zone signed with DNSSEC
deployment scenarii

provisioned CPE

- domain name
- authentication keys
- certificate

non provisioned CPE

- ACME to generate a certificate with proof of possession of FQDN
Thank you!
