

# Autodiscovery

- Clear interest in WG to work on this topic.
- No clear consensus on a specific approach.
- Proposals (four of them) progressively closer semantically, seems likely convergence can happen.
- But, important differences remain.
  - At least: transport (L2, L3), liveness, security, maybe multihop.
- Chairs propose to charter a design team to close on a single proposal, by next meeting.
  - Might build on one of the existing drafts, might be a new draft, up to the design team.
  - Emphasis on pragmatism, OK to limit applicability (for example, to a single administrative domain).
- Questions? Comments? Volunteers?
