

# IRTF ↔ IETF Collaboration

Worked Well	Uncertain	Anti-pattern
ICCNRG ↔ TSV	HIP	NSRG
DTNRG ↔ DTN	RRG	ASRG
NMRG → ANIMA	END2END	
CFRG → SEC	QIRG	
RMRG → RMT, MBONED		
P2PRG → ALTO		

# Some observations

- Different “forms” of transfer
  - e.g. NMRG→ANIMA = “one shot” transfer, “spin-off”.
  - e.g. CFRG→SEC & ICCNRG→TSV = “continuous” transfer, expert vetting of proposals
  - QIRG = new technology learning
- Is it a goal for RG to transfer? Should they transfer more/better?
- Potential areas of improvements or change in approach/practices...
- Should we document this topic more precisely?
  - Criteria and conditions for successful transfer
  - Learnings from success and failure
