

Observations from SMPTE 2019 Technical Conference

MOPs @ IETF 106 Singapore
Glenn Deen

SMPTE 2019 Technical Conference held October 21-24 in Los Angeles

Key observations that relate to MOPs

1. Professional video's SMPTE 2110 shift to IP Networks continues
 - Several talks/papers on deployment experiences
 - Both Production and Distribution
2. Time distribution/synchronization remains an area of active discussion
 - Old non-IP world provided time
 - IP does not
 - Much discussion on time service options and technologies
 - PTP (Precision Time Protocol) is the popular method but others also exist
3. IPv6 was mentioned by several speakers!
 - Still not pervasive but awareness and interest is growing
