draft-ietf-regext-tmch-func-spec

Gustavo Lozano
IETF 106

draft-ietf-regext-tmch-func-spec

- This document describes the requirements, the architecture and the interfaces between the ICANN Trademark Clearinghouse (TMCH) and Domain Name Registries / Registrars for the provisioning and management of domain names during Sunrise and Trademark Claims Periods.

- First version published in March 2013.

- No major changes since May 2014.

- Intended status: Informational.

- This draft has been implemented by all new gTLDs Registries, ICANN-accredited Registrars, and the TMDB provider.

draft-ietf-regext-tmch-func-spec

- Back in early 2016, the idea was to publish it as an RFC.

- The I-D was adopted as a WG item of the EPPEXT WG.

- Feedback was received on the I-D:
  - https://mailarchive.ietf.org/arch/msg/regext/VDA8hIp2jvSQzUgyCpfguKmlHp8

- Based on the feedback the following ICANN document was updated:
  - https://newgtlds.icann.org/en/about/trademark-clearinghouse/matching-rules-14jul16-en.pdf

draft-ietf-regext-tmch-func-spec

- To the best of my knowledge, there are no pending action items on the draft and the feedback received has been incorporated.

- This I-D is mature, and the services described have been in operations for years.

- This I-D is linked from legal contracts, and we would like to have a stable reference.
