

Architecture Updates

- Bill Munyan
- Adam Montville

Version -04

- Update pushed on 10/29
- GitHub Issues Resolved:
 - 1 – Update XMPP-Grid references to RFC-8600
 - 3 – Clarify Enterprise Boundary
 - 5 – Clarify Sub-Architectures
 - 9 – Invert Endpoint/PCS boxes in figure 2
 - 10 – Make “Orchestrator” plural in figure 2
 - 11 – Add Role text to the draft re: components
 - 12 – Re-title figure 2
 - 13 – Reordering of the draft
 - 18 – Substitute enterprise boundary with ecosystem boundary

Other Updates

- Added a very simple “architectural overview” diagram simply showing SACM components as both information provider and information consumer
- Communication through the integration service

Other Updates

- Reorganized the draft to show architectural diagrams as more role-based
- Updated sections for Collection Sub-Architecture and Evaluation Sub-Architecture
 - Added Posture Evaluation Workflow sections
 - A more detailed Interactions section
- Templated sections in each security domain workflow to outline components, capabilities, and workflow(s) needed.
- Detailed Configuration Assessment Workflow

What's Next?

- More draft updates!
 - Continue to update the different security domain workflow sections
 - Maybe more details regarding the integration service and its requirements
 - Remove implementation specific sections at the end of the draft
 - EPCP and XMPP-specific diagrams
- Start a more solution-oriented draft outlining XMPP implementations aggregated from the various hackathons
